Zagal, Benj Edwards, 2024-05-14 The curious history technology and technocultural context of Nintendo's short lived stereoscopic gaming console the Virtual Boy With glowing red stereoscopic 3D graphics the Virtual Boy cast a prophetic hue Shortly after its release in 1995 Nintendo's balance sheet for the product was in the red as well Of all the innovative long shots the game industry has witnessed over the years perhaps the most infamous and least understood was the Virtual Boy Why the Virtual Boy failed and where it succeeded are questions that video game experts Jos Zagal and Benj Edwards explore in *Seeing Red* but even more interesting to the authors is what the platform actually was what it promised how it worked and where it fit into the story of gaming Nintendo released the Virtual Boy as a standalone table top device in 1995 and quickly discontinued it after lackluster sales and a lukewarm critical reception In *Seeing Red* Zagal and Edwards examine the device's technical capabilities its games and the cultural context in the US in the 1990s when Nintendo developed and released the unusual console The Virtual Boy in their account built upon and extended an often forgotten historical tradition of immersive layered dioramas going back 100 years that was largely unexplored in video games at the time The authors also show how the platform's library of games conveyed a distinct visual aesthetic style that has not been significantly explored since the Virtual Boy's release having been superseded by polygonal 3D graphics The platform's meaning they contend lies as much in its design and technical capabilities and affordances as it does in an audience's perception of those capabilities Offering rare insight into how we think about video game platforms *Seeing Red* illustrates where perception and context come quite literally into play **Dungeon Predator: Vol.1** Hodam, 2025-03-21 Class changing to the hidden class Demonic Swordsman You are the first one to discover the hidden dungeon You are the first one to discover the hidden You are the first one You are I'm a gamer who uses ESP I'll take it all **Catalog of audiovisual productions** United States. One ANCIENT MYSTERIES The Psychology of Magic and the Magic of Psychology Amir Raz, Jay A. Olson, Gustav
Kuhn, 2016-11-18 Magicians have dazzled audiences for many centuries however few researchers have studied how let alone
why most tricks work The psychology of magic is a nascent field of research that examines the underlying mechanisms that
conjurers use to achieve enchanting phenomena including sensory illusions misdirection of attention and the appearance of
mind control and nuanced persuasion Most studies to date have focused on either the psychological principles involved in
watching and performing magic or neuromagic the neural correlates of such phenomena Whereas performers sometimes
question the contributions that modern science may offer to the advancement of the magical arts the history of magic reveals
that scientific discovery often charts new territories for magicians In this research topic we sketch out the symbiotic
relationship between psychological science and the art of magic On the one hand magic can inform psychology with
particular benefits for the cognitive social developmental and transcultural components of behavioural science Magicians
have a large and robust set of effects that most researchers rarely exploit Incorporating these effects into existing
experimental even clinical paradigms paves the road to innovative trajectories in the study of human behaviour For example
magic provides an elegant way to study the behaviour of participants who may believe they had made choices that they
actually did not make Moreover magic fosters a more ecological approach to experimentation whereby scientists can probe
participants in more natural environments compared to the traditional lab based settings Examining how magicians
consistently influence spectators for example can elucidate important aspects in the study of persuasion trust decision
making and even processes spanning authorship and agency Magic thus offers a largely underused armamentarium for the
behavioural scientist and clinician On the other hand psychological science can advance the art of magic The psychology of
deception a relatively understudied field explores the intentional creation of false beliefs and how people often go wrong
Understanding how to methodically exploit the tenuous twilight zone of human vulnerabilities perceptual logical emotional
and temporal becomes all the more revealing when top down influences including expectation symbolic thinking and framing
join the fray Over the years science has permitted magicians to concoct increasingly effective routines and to elicit
heightened feelings of wonder from audiences Furthermore on occasion science leads to the creation of novel effects or the
refinement of existing ones based on systematic methods For example by simulating a specific card routine using a series of
computer stimuli researchers have decomposed the effect and reconstructed it into a more effective routine Other magic
effects depend on meaningful psychological knowledge such as which type of information is difficult to retain or what

changes capture attention Behavioural scientists measure and study these factors By combining analytical findings with performer intuitions psychological science begets effective magic Whereas science strives on parsimony and independent replication of results magic thrives on reproducing the same effect with multiple methods to obscure parsimony and minimise detection This Research Topic explores the seemingly orthogonal approaches of scientists and magicians by highlighting the crosstalk as well as rapprochement between psychological science and the art of deception
