Vyse,2013-09-01 While we live in a technologically and scientifically advanced age superstition is as widespread as ever Not limited to just athletes and actors superstitious beliefs are common among people of all occupations educational backgrounds and income levels In this fully updated edition of Believing in Magic renowned superstition expert Stuart Vyse investigates our tendency towards these irrational beliefs Superstitions he writes are the natural result of several psychological processes including our human sensitivity to coincidence a penchant for developing rituals to fill time to battle nerves impatience or both our efforts to cope with uncertainty the need for control and more In a new Introduction Vyse discusses important developments and the latest research on jinxes paranormal beliefs and luck He also distinguishes superstition from paranormal and religious beliefs and identifies the potential benefits of superstition for believers He examines the research to demonstrate how we can better understand complex human behavior Although superstition is a normal part of our culture Vyse argues that we must provide alternative methods of coping with life s uncertainties by teaching decision analysis promoting science education and challenging ourselves to critically evaluate the sources of our beliefs Magic and the Mind Eugene Subbotsky,2010-03-31 Magical thinking and behavior have traditionally been viewed as immature misleading alternatives to scientific thought that in children inevitably diminish with age In adults these inclinations have been labeled by psychologists largely as superstitions that feed on frustration uncertainty and the unpredictable nature of certain human activities In Magic and the Mind Eugene Subbotsky provides an overview of the mechanisms and development of magical thinking and beliefs throughout the life span while arguing that the role of this type of thought in human development should be reconsidered Rather than an impediment to scientific reasoning or a byproduct of cognitive development in children magical thinking is an

important and necessary complement to these processes enhancing creativity at problem solving and reinforcing coping strategies among other benefits In adults magical thinking and beliefs perform important functions both for individuals coping with unsolvable problems and stressful situations and for society enabling mass influence and promoting social harmony Operating in realms not bound by physical causality such as emotion relationships and suggestion magical thinking is an ongoing developing psychological mechanism that Subbotsky argues is integral in the contexts of politics commercial advertising and psychotherapy and undergirds our construction and understanding of meaning in both mental and physical worlds Magic and the Mind represents a unique contribution to our understanding of the importance of magical thinking offering experimental evidence and conclusions never before collected in one source It will be of interest to students and scholars of developmental psychology as well as sociologists anthropologists and educators *Science Magic* Alison Alexander,1987-09 Hands on science projects for the early elementary grades Handbook of Research on Children's and Young Adult Literature Shelby Wolf,Karen Coats,Patricia Enciso,Christine Jenkins,2011-04-27 This multidisciplinary handbook pulls together in one volume the research on children s and young adult literature which is currently scattered across three intersecting disciplines education English and library and information science **PC Mag** ,1995-03-28 PCMag.com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology
