Liveness in Modern Music Paul Sanden, 2013-01-17 This study investigates the idea and practice of liveness in modern music Understanding what makes music live in an ever changing musical and technological terrain is one of the more complex and timely challenges facing scholars of current music where liveness is typically understood to represent performance and to stand in opposition to recording amplification and other methods of electronically mediating music The book argues that liveness itself emerges from dynamic tensions inherent in mediated musical contexts tensions between music as an acoustic human utterance and musical sound as something produced or altered by machines Sanden analyzes liveness in mediatized music music for which electronic mediation plays an intrinsically defining role exploring the role this

concept plays in defining musical meaning In discussions of music from both popular and classical traditions Sanden demonstrates how liveness is performed by acts of human expression in productive tension with the electronic machines involved in making this music whether on stage or on recording Liveness is not a fixed ontological state that exists in the absence of electronic mediation but rather a dynamically performed assertion of human presence within a technological network of communication This book provides new insights into how the ideas of performance and liveness continue to permeate the perception and reception of even highly mediatized music within a society so deeply invested on every level with the use of electronic technologies *Electronic and Experimental Music* Thom Holmes,2008-03-31 *Electronic and Experimental Music* provides a thorough treatment of the history of technology and music The third edition incorporates a contemporary pedagogical design offering a variety of learning aids to help readers understand and review basic concepts history and milestones in electronic music *Machine Music* Morten Riis,2016-05-13 Sound and music is a product of technology Whether we are enjoying a concert working in a sound studio or listening with headphones on technical equipment lays the foundation of our musical experience In *Machine Music A Media Archaeological Excavation* postdoc composer and PhD Morten Riis tunes into normally undetected layers of music Musical machines be it ancient or modern instruments computers loudspeakers or amplifiers are not just silent mediators of sounds They all have their own unique voices We simply have to learn to listen to them **Instruments for New Music** Thomas Patteson,2016 Listening to instruments The joy of precision mechanical instruments and the aesthetics of automation The alchemy of tone J rg Mager and electric music Sonic handwriting media instruments and musical inscription A new perfect musical instrument the trautionium and electric music in the 1930s The expanding instrumentarium *The Routledge Reader on the Sociology of Music* John Shepherd,Kyle Devine,2015-03-24 *The Routledge Reader on the Sociology of Music* offers the first collection of source readings and new essays on the latest thinking in the sociology of music Interest in music sociology has increased dramatically over the past decade yet there is no anthology of essential and introductory readings The volume includes a comprehensive survey of the field s history current state and future research directions It offers six source readings thirteen popular contemporary essays and sixteen fresh new contributions along with an extended Introduction by the editors *The Routledge Reader on the Sociology of Music* represents a broad reference work that will be a resource for the current generation of sociologically inclined musicologists and musically inclined sociologists whether researchers teachers or students **Body, Sound and Space in Music and Beyond: Multimodal Explorations** Clemens Wöllner,2017-04-07 Body and space refer to vital and interrelated dimensions in the experience of sounds and music Sounds have an overwhelming impact on feelings of bodily presence and inform us about the space we experience Even in situations where visual information is artificial or blurred such as in virtual environments or certain genres of film and computer games sounds may shape our perceptions and lead to surprising new experiences This book discusses recent developments in a

range of interdisciplinary fields taking into account the rapidly changing ways of experiencing sounds and music the consequences for how we engage with sonic events in daily life and the technological advancements that offer insights into state of the art methods and future perspectives Topics range from the pleasures of being locked into the beat of the music perception action coupling and bodily resonance and affordances of musical instruments to neural processing and cross modal experiences of space and pitch Applications of these findings are discussed for movement sonification room acoustics networked performance and for the spatial coordination of movements in dance computer gaming and interactive artistic installations
