

A study was started on the possible "low consumption" alternative design for the big dipoles of the PCL.

Key aspects:

- To provide a "low consumption" design solution
- RELIABILITY is a key word for these magnets: they will be placed in a dumping tunnel, area very radioactive and interventions must be MINIMIZED.
- The magnets could be subjected to high doses of radiation (new simulation on-going)
- Assumptions are the following:
  - The most simple (and economic) cryogenic solution seems to take advantage of the cryo coolants available at the IP (Detector Solenoid). They will be at 4.5 K (LHe to the solenoid) or at 40-60 K (thermal shields). Distance from the PCL magnets: 35-100m (depending by the PCL versions considered).
  - In these condition the cost of the cryogenic system will consist in the cryogenic transfer line and the valve box for the distribution to the magnets. Other solution are also considered.
  - For the magnet COILS, several possibility are evaluated:
    - "Classic SC" solution (i.e. NbTi)
    - HTS (High Temperature Superconductor) (i.e. MgB<sub>2</sub>, YBCO, etc.)

Each solution has advantages and disadvantages, trying to identify them to provide some first evaluations..

"Active" coil cross-section comparison for some different solutions.

Other aspect to be considered:

- Complexity/cost of the coil winding
- Complexity/cost of cryostats
- Operation
- Stability and radiation resistance

and educational outcomes as identified by policy makers and experts of OECD countries brought together at the Washington Conference Preparing Youth for the 21st Century      **Resources in Education** ,2001-04      **Learning from the Federal Market?Based Reforms** William J. Mathis,Tina M. Trujillo,2016-06-01 Over the past twenty years educational policy has been characterized by top down market focused policies combined with a push toward privatization and school choice The new Every Student Succeeds Act continues along this path though with decision making authority now shifted toward the states These market based reforms have often been touted as the most promising response to the challenges of poverty and educational disenfranchisement But has this approach been successful Has learning improved Have historically low scoring schools turned around or have the reforms had little effect Have these narrow conceptions of schooling harmed the civic and social purposes of education in a democracy This book presents the evidence Drawing on the work of the nation s most prominent researchers the book explores the major elements of these reforms as well as the social political and educational contexts in which they take place It examines the evidence supporting the most common school improvement strategies school choice reconstitutions or massive personnel changes and school closures From there it presents the research findings cutting across these strategies by addressing the evidence on test score trends teacher evaluation miracle schools the Common Core State Standards school choice the newly emerging school improvement industry and re segregation among others The weight of the evidence indisputably shows little success and no promise for these reforms Thus the authors counsel strongly against continuing these failed policies The book concludes with a review of more promising avenues for educational reform including the necessity of broader societal investments for combatting poverty and adverse social conditions While schools cannot single handedly overcome societal inequalities important work can take place within the public school system with evidence based interventions such as early childhood education detracking adequate funding and full service community schools all intended to renew our nation s commitment to democracy and equal educational opportunity      **Handbook of Field Experiments** Esther Duflo,Abhijit Banerjee,2017-03-21 Handbook of Field Experiments Volume Two explains how to conduct experimental research presents a catalog of research to date and describes which areas remain to be explored The new volume includes sections on field experiments in education in developing countries how to design social protection programs a section on how to combat poverty and updates on data relating to the impact and determinants of health levels in low income countries Separating itself from circumscribed debates of specialists this volume surpasses the many journal articles and narrowly defined books written by practitioners This ongoing series will be of particular interest to scholars working with experimental methods Users will find results from politics education and more Balances methodological insights with analyses of principal findings and suggestions for further research Appeals broadly to social scientists seeking to develop an expertise in field experiments Written in a language that is accessible to graduate students and non specialist economists      **Hope at Last for At-risk Youth** Robert D. Educational policy continues to be of major concern. Policy debates about economic growth and national competitiveness for example commonly focus on the importance of human capital and a highly educated workforce. Defining the theoretical boundaries and methodological approaches of education policy research are the two primary themes of this comprehensive AERA sponsored Handbook. Organized into seven sections, the Handbook focuses on: 1. disciplinary foundations of educational policy, 2. methodological perspectives, 3. the policy process, 4. resources management and organization, 5. teaching and learning policy, 6. actors and institutions, and 7. education access and differentiation. Drawing from multiple disciplines, the Handbook's over one hundred authors address three central questions: What policy issues and questions have oriented current policy research? What research strategies and methods have proven most fruitful? And what issues, questions, and methods will drive future policy research? Topics such as early childhood education, school choice, access to higher education, teacher accountability, and testing and measurement cut across the 63 chapters in the volume. The politics surrounding these and other issues are objectively analyzed by authors and commentators. Each of the seven sections concludes with two commentaries by leading scholars in the field. The first considers the current state of policy design and the second addresses the current state of policy research. This book is appropriate for scholars and graduate students working in the field of education policy and for the growing number of academic government and think tank researchers engaged in policy research.
