

New theory on the magnetic fields.

This new theory is based on a hypothetical matter that fills the universe (-OH), which would be in crystalline state neutral in space, but when they come into contact with the centrifugal force of the celestial bodies changes to a field electrically charged.

The intensity of these magnetic fields according to this theory is due to three main causes;

1. The amount of matter that finds the body celestial in outer space, in its translational motion, will influence its magnetic intensity.
2. The speed of rotation of the celestial bodies will influence its magnetic intensity.
3. Finally the size of celestial bodies, will also influence its magnetic intensity.

Magnetic Fields Of Celestial Bodies:

Magnetic Fields of Celestial Bodies Ye Shi-hui, 2012-12-06 Magnetism is one of the basic properties of matter. Mankind has travelled a long road in discovering and utilizing magnetism and in this respect the ancient Chinese people have made outstanding contributions. In the book *Lu's Spring and Autumn* written near the end of the Warring States Period, i.e. in the third century B.C. there is a statement on the attraction of iron by lodestones. So at that time it was known that magnets can attract ferromagnetic material. At the beginning of the first century A.D. viz. in the early years of the East Han Dynasty the famous scholar Wang Chong wrote in his masterpiece *Len Hien* that the handle of a magnetic dipper pointed to the south. It was thus discovered at the time that magnets can point to the poles of the geomagnetic field. At the beginning of the twelfth century during the reign of Emperor Hui of the Sung Dynasty in the two books written by Zhu Yu and Xu Jin respectively there are descriptions of the compass used in navigation. This tells us that the application of compasses was rather widespread at that time. The distinguished scientist Shen Kuo 1031-1085 discovered the declination of the terrestrial magnetic field. This is four hundred and more years earlier than its discovery by Christopher Columbus in 1492 during his voyage across the Atlantic Ocean. Such facts as these manifest the important contributions of ancient China to global civilization.

Worlds in Interaction: Small Bodies and Planets of the Solar System Hans Rickman, M.J. Valtonen, 2012-12-06 Planet Earth is part of our Galactic environment not just the product of it and it is still today influenced by phenomena related to Galactic forces. Specifically our planet is affected by its near environment in particular the small bodies in the Solar System. This book reviews the processes which cause the collisions of these small bodies with the Earth as well as the consequences of such collisions. The various articles take the reader through the Galaxy-Solar System connection to the orbital dynamics of the small bodies and to their number and distribution in near Earth space. The hazards of the impacts of small bodies on Earth are evaluated and the geophysical records of such impacts are discussed. The book takes the reader to the forefront of research on both impact cratering and the origin and evolution of small bodies in the Solar System. Thus it brings together two subjects, geophysics and astronomy which are usually discussed in separate volumes but are closely knit together in this particular area of research.

In addition to teaching, he has made great efforts to develop the application of scientific theory and technology.

participated in the development of many electronic circuits and computer applications projects and published many research papers and works Among them MM 1000 Friction Testing Machine Microcomputer System software and hardware development passed provincial technical appraisal in December 1987 The system plays an important role in the research of wet friction and wear testing technology and it has won the third prize of the Ministry of Electricity Before retirement he was an associate professor in the Department of Computer Science Xiamen University

Unified theory of the field and structure of the universe Аркадий Серков, 2022-01-11 The book examines the issues of the general structure and functioning of matter including the macro and micro world establishes a connection between them and gives a forecast for the development of the world

The Theory of Compressibility Ether: Interpretation and Development of Modern Physics Hu Chang-Wei, 2024-12-31 Modern physics has laid a solid foundation for human beings to enter the electronic and information age but it has also brought some confusion Before the birth of modern physics people knew the physical world clearly intuitively and here cause and effect are clear while modern physics showed the variability of spacetime the particle nature of energy the uncertainty of microscopic motion and other strange phenomena Modern cosmology based on modern physics has seen the emergence of magical concepts such as the Big Bang inflation dark matter dark energy and so on In this regard most scientists consider that nature is inherently complex and changeable and with the development of science it is natural that the world is becoming more and more complex However many people hold the opposite opinion such as the EPR paradox put forward by Einstein Bohm's hidden variables model and so on They believe that the theory of quantum mechanics is incomplete

Quantum Field Theory Roberto Iengo, 2018-07-10 While there are many good books in particle physics very seldom if ever a non specialist comprehensive description of Quantum Field Theory has appeared The intention of this short book is to offer a guided tour of that innermost topic of Theoretical Physics in plain words and avoiding the mathematical apparatus but still describing its various facets up to the research frontier with the aim to give a glimpse of what the human mind has been capable of imagining for dealing with the behavior of Nature at the most fundamental level

The Three-body Problem from Pythagoras to Hawking Mauri Valtonen, Joanna Anosova, Konstantin Kholshevnikov, Aleksandr Mylläri, Victor Orlov, Kiyotaka Tanikawa, 2016-05-03 This book written for a general readership reviews and explains the three body problem in historical context reaching to latest developments in computational physics and gravitation theory The three body problem is one of the oldest problems in science and it is most relevant even in today's physics and astronomy The long history of the problem from Pythagoras to Hawking parallels the evolution of ideas about our physical universe with a particular emphasis on understanding gravity and how it operates between astronomical bodies The oldest astronomical three body problem is the question how and when the moon and the sun line up with the earth to produce eclipses Once the universal gravitation was discovered by Newton it became immediately a problem to understand why these three bodies form a stable system in spite of the pull exerted from one to the other In fact it was a big question whether this system is stable at

all in the long run Leading mathematicians attacked this problem over more than two centuries without arriving at a definite answer The introduction of computers in the last half a century has revolutionized the study now many answers have been found while new questions about the three body problem have sprung up One of the most recent developments has been in the treatment of the problem in Einstein s General Relativity the new theory of gravitation which is an improvement on Newton s theory Now it is possible to solve the problem for three black holes and to test one of the most fundamental theorems of black hole physics the no hair theorem due to Hawking and his co workers

Verification of the P. Laplace's hypothesis "on the transformation of gravitational forces in molecular"

Аркадий Серков,Антон Серков,2022-05-17 This book was first published in Russian in 2014 The main idea of the book was to try to prove that the basis of all physical and chemical processes is mass or rather the interaction of masses of elementary particles and not mythical electric charges It can say that a significant part of the author s life was devoted to this All this time the author was inspired by the idea hypothesis of PS Laplace that the forces acting between the molecules of matter are transformed modified gravitational forces To prove the hypothesis put forward Laplace carried out calculations in which he showed that in the transition from gravitational forces to molecular forces the density of matter in elementary particles increases 10 10 times Such a significant increase in the density of matter leads to an increase in the intensity of gravitational forces their transformation into molecular ones **The Solvay Conferences on Physics** Jagdish Mehra,2012-12-06 Jagdish Mehra s historical account of the Solvay Conferences from 1911 to 1973 demonstrates not only the great influence which these conferences have had on the development of modern physics but it also shows clearly how far sighted and well planned were the intentions of Ernest Solvay when he took the initiative for organizing a new type of international conferences In contrast to the conventional meetings in which reports are given on the successful solution of scientific problems the Solvay Conferences were conceived to help directly in solving specific problems of unusual difficulty The importance of the quantum structure of Nature had become well understood already by 1911 but at that time there was no hope for an answer to the extremely difficult new questions posed by the atomic phenomena The new conferences should therefore be devoted primarily to thorough discussions of such problems between a small number of the most competent physicists and Ernest Solvay was guided by the hope that the discussions would eventually lead to a real and substantial progress The earliest Solvay Conferences which I attended were those of 1927 1930 and 1933 and they served this purpose extremely well In 1926 the mathematical formalism of quantum and wave mechanics approached its final shape but the interpretation was still controversial Schrodinger hoped that his matter waves could be considered as waves in three dimensional space and time and that the discontinuous feature of quantum jumps could be avoided thereby *Literature 1982, Part 2* Siegfried Böhme,Professor Dr. Walter Fricke,Herbert Hefele,Inge Heinrich,Wilfried Hofmann,Dietlinde Krahn,Vladimir R. fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 32 contains literature published in 1982 and received before February 11 1983 some older literature which was received late and which is not recorded in earlier volumes is also included We acknowledge with thanks contributions to this volume by Dr J Bou a Prague who surveyed journals and publications in Czech and supplied us with abstracts in English
