Phenomenology and Aesthetics M. Kronegger, 2012-12-06 and the one in the middle which judges as he enjoys and

enjoys as he judges This latter kind really reproduces the work of art anew The division of our Symposium into three sections is justified by the fact that phenomenology from Husserl Heidegger Moritz Geiger Ingarden in Germany and Poland Merleau Ponty Paul Ricoeur E Levinas in France Unamuno in Spain and Tymieniecka in the United States have revealed striking coincidences in trying to answer the following questions What is the philosophical vocation of literature Does literature have any significance for our lives Why does the lyric moment present in all creative endeavors in myth dance plastic art ritual poetry lift the human life to a higher and authentically human level of the existential experience of man Our investigations answer our fundamental inquiry What makes a literary work a work of art What makes a literary work a literary work if not aesthetic enjoyment As much as the formation of an aesthetic language culminates in artistic creation the formation of a philosophical language lives within the orbit of creative imagination

Utopia and Consciousness William S. Haney II, 2011-04-15 In his book *Archaeologies of the Future The Desire Called Utopia and Other Science Fictions* 2007 Fredric Jameson analyzes the multiple components of utopia and the possibility of achieving utopia in the near future As this book argues however human civilization will never achieve utopia unless humans reach a state of pure consciousness in which they will use their full mental potential and avoid making blunders in life that would undermine the possibility of a utopia This book develops a non teleological comparative poetics between Western and Sanskrit literary traditions by analyzing their opposing theories of language consciousness and meaning This comparison seeks to demonstrate the complementary nature of their two perspectives the objective conceptual emphasis of contemporary Western theory and the subjective experiential emphasis of Sanskrit poetics The potential contribution to the West of Indian culture in general and Sanskrit poetics in particular centers on the phenomenon of direct experience Without the direct experience of pure consciousness humans will not achieve a state of utopia because they will remain entangled in materialism without access to idealism or spiritualism available only through the direct experience of the unity of pure consciousness or the void of conceptions

The Oxford Handbook of Happiness Susan A. David, Ilona Boniwell, Amanda Conley Ayers, 2014 A text for researchers and practitioners interested in human happiness Its editors and chapter contributors are world leaders in the investigation of happiness across the fields of psychology education philosophy social policy and economics

Cyberculture, Cyborgs and Science Fiction William S. Haney II, 2006-01-01 Addressing a key issue related to human nature this book argues that the first person experience of pure consciousness may soon be under threat from posthuman biotechnology In exploiting the mind's capacity for instrumental behavior posthumanists seek to extend human experience by physically projecting the mind outward through the continuity of thought and the material world as through telepresence and other forms of prosthetic enhancements

Posthumanism envisions a biology machine symbiosis that will promote this extension arguably at the expense of the natural tendency of the mind to move toward pure consciousness As each chapter of this book contends by forcibly overextending and thus jeopardizing the neurophysiology of consciousness the posthuman condition could in the long term undermine human nature defined as the effortless capacity for transcending the mind's conceptual content Presented here for the first time the essential argument of this book is more than a warning it gives a direction far better to practice patience and develop pure consciousness and evolve into a higher human being than to fall prey to the Faustian temptations of biotechnological power As argued throughout the book each person must choose for him or herself between the technological extension of physical experience through mind body and world on the one hand and the natural powers of human consciousness on the other as a means to realize their ultimate vision

Meditation – Neuroscientific Approaches and Philosophical Implications Stefan Schmidt, Harald Walach, 2013-11-19. This volume features a collection of essays on consciousness, which has become one of the hot topics at the crossroads between neuroscience, philosophy, and religious studies. Is consciousness something the brain produces? How can we study it? Is there just one type of consciousness or are there different states that can be discriminated? Are so-called higher states of consciousness that some people report during meditation pointing towards a new understanding of consciousness? Meditation research is a new discipline that shows new inroads into the study of consciousness. If a meditative practice changes brain structure itself, this is direct proof of the causal influence of consciousness onto its substrate. If different states of consciousness can be linked with properties and states of the brain, this can be used to study consciousness more directly. If the sense of self is modifiable through meditative techniques and this can be objectively shown through neuroimaging, this has profound implications for our understanding of who we are. Can consciousness in deep states of meditative absorption actually access some aspect of reality which we normally don't? Meditation research can potentially foster us with a new access to the phenomenological method in general. This has even been branded with a new catch phrase: Contemplative Science. It brings together the most modern neuroscientific approach and the most advanced phenomenological methodology of studying the mind from within through highly skilled self-observation that has gone through many thousand hours of honing the capacity to look carefully without distraction. This book addresses these issues by bringing together some of the leading researchers and thinkers in the field. The scope of the volume reaches from first person neuroscience to Indian philosophy, from pedagogic applications to epistemological aspects and from compassion meditation to the study of brain activity.

Organizing through Empathy Kathryn Pavlovich, Keiko Krahne, 2013-09-11. Empathy dissolves the boundaries between self and others and feelings of altruism towards others are activated. This process results in more compassionate and caring contexts as well as helping others in times of suffering. This book provides evidence from neuroscience and quantum physics that it is empathy that connects humanity and that this awareness can create a more just

society It extends interest in values based management exploring the intellectual physical ecological spiritual and aesthetic well being of organizations and society rather than the more common management principles of maximising profit and efficiency This book challenges the existing paradigm of capitalism by providing scientific evidence and empirical data that empathy is the most important organizing mechanism The book is unique in that it provides a comprehensive review of the transformational qualities of empathy in personal organizational and local contexts Integrating an understanding based upon scientific studies of why the fields of positive psychology and organizational scholarship are important it examines the evidence from neuroscience and presents leading edge studies from quantum physics with implications for the organizational field Together the chapters in this book attempt to demonstrate how empathy helps in the reduction of human suffering and the creation of a more just society
