Grounding in English and Arabic News Discourse Esam N. Khalil, 2000-01-01
 Grounding in English and Arabic News Discourse explores the discourse notion of grounding viz the foreground background structure and examines it in the various structures that occur in short news texts A text level approach to grounding and the differentiation between several core concepts relating to the various textual and non textual structures distinguish the book from other approaches in the field A corpus based analysis focuses on sentence initial expressions and examines the grounding signalling function of several markers in both English and Arabic The analysis captures constraints on the occurrence of particular markers and the extensive illustrative examples explain the strategies that writers employ to cope with problems of recasting grounding values in news texts The author also shows how the failure to signal appropriate grounding values is likewise associated with the failure to deliver the appropriate type of text Grounding is a relatively unexplored area of investigation in Arabic text linguistics and the study identifies a series of previously unrecognized language features highlighting the discourse pragmatic function that syntax serves The book will be invaluable to researchers and students of discourse pragmatics contrastive rhetoric and communication It will also be of interest to all those involved in translation and intercultural studies

highest scientific standards The work builds on the existing knowledge in Descriptive Linguistics but also on the insights from Theoretical Linguistics It consists of two main parts running in parallel the Checklist with all the grammatical features and phenomena the grammar writer can address and the accompanying Manual with the relevant background information definitions methodological caveats representative examples tests pointers to elicitation materials and bibliographical references The areas covered are Phonology Morphology Lexicon Syntax and Meaning The Manual is endowed with hyperlinks that connect information across the work and with a pop up glossary The SignGram Blueprint will be a landmark for the description of sign language grammars in terms of quality and quantity

Teaching and Learning in History Ola Hallden, 2012-10-12 Research on history instruction and learning is emerging as an exciting new field of inquiry The editors prepared this volume because the field is at an important moment in its development a stage where there is research of sufficient depth and breadth to warrant a collection of representative pieces The field of research on history teaching and learning connects with both traditional research on social studies and with recent cognitive analyses of domains such as mathematics and physics However the newer research goes beyond these activities as well Where traditional research approaches to social studies instruction and learning have focused on curriculum they have avoided the study of purely disciplinary features the textual components of history and the concomitant demands as well as the nature of various learners Where recent cognitive analyses of mathematics and physics have dealt with misconceptions and knowledge construction they have avoided topics such as perspective taking interpretation and rhetorical layerings The new work by contrast has been concerned with these issues as well as the careful analyses of the nature of historical tasks and the nature of disciplinary and instructional explanations The lines of research presented in these chapters are both compelling and diverse and include a range of topical questions such as What affects the quality of teaching How are historical documents interpreted in the writing of history How is history explained What are the classroom demands on an elementary school social studies teacher What does text accomplish or fail to accomplish in educational settings How do teachers think about particular topics for history teaching Although much of the research reflects a grounding in or the influence of cognitive psychology not all of it derives from that tradition Traditions of rhetoric curriculum analysis and developmental psychology are also woven throughout the chapters The editors envision this volume as a contribution to educational research in a subject matter and as a tool for practitioners concerned with the improvement of instruction in history They also anticipate that it will contribute to cognitive science

Spontaneous Spoken Language J. E. Miller, Regina Weinert, 1998 Jim Miller and Regina Weinert investigate syntactic structure and the organization of discourse in spontaneous spoken language Using data from English German and Russian they develop a systematic analysis of spoken English and highlight properties that hold across languages The authors argue that the differences in syntax and the construction of discourse between spontaneous speech and written language bear on various areas of linguistic theory apart from having obvious implications

for syntactic analysis In particular they bear on typology Chomskyan theories of first language acquisition and the perennial problem of language in education In current typological practice written and spontaneous spoken texts are often compared the authors show convincingly that typological research should compare like with like The consequences for Chomskyan and indeed all theories of first language acquisition flow from the central fact that children acquire spoken language but learn written language

News As Discourse Teun A. van Dijk, 2013-10-28 First Published in 1990 This book presents a new interdisciplinary theory of news in the press Against the background of developments in discourse analysis it is argued that news should be studied primarily as a form of public discourse Whereas in much mass communication research the economic social or cultural dimensions of news and news media are addressed the present study emphasizes the importance of an explicit structural analysis of news reports Such an analysis should provide a qualitative alternative to traditional methods of content analysis Also attention is paid to processes of news production by journalists and news comprehension by readers in terms of the social cognitions of news participants In this way news structures can also be explicitly linked to social practices and ideologies of news making and indirectly to the institutional and macro sociological contexts of the news media
