Language in the Mainstream Constant Leung,Christine Davison,Bernard Mohan,2014-07-15 Since it was first established in the 1970 s the Applied Linguistics and Language Study series has become a major force in the study of practical problems in human communication and language education Drawing extensively on empirical research and theoretical work in linguistics sociology psychology and education the series explores key issues in language acquisition and language use English as a Second Language learners are now a considerable and increasing part of the mainstream of urban schools in English speaking countries Beyond the learning of English this development raises broader questions of language as a medium of education in a multilingual multicultural environment Drawing on their experience as researchers and educators in Australia Canada and England the authors of English as a Second Language in the Mainstream present an up to date account of advances in theory and practice Their analysis of system wide provision however suggests that a truly responsive educational vision is lacking government policy is inadequate educational practices for ESL students are either underdeveloped or poorly coordinated with practices for other students and the rhetoric of reform fails to engage significantly with issues of teaching and resources The authors argue towards a more comprehensive vision which can acknowledge the relation between issues concerning ESL students and issues concerning the educational system as a whole which can coordinate reforms in ESL education with general reforms which can explicitly and systematically integrate language learning and content learning and which can build more positively on the multilingual and multicultural nature of modern education for all students *EBOOK: The First Year At University: Teaching Students In Transition* Bill

Johnston,2010-01-16 If academics are genuinely to develop as teachers throughout their careers if they are to continue to produce innovations they have to bring a scholarly orientation to teaching This series will show them how to do that It will teach them how to make credible cases for different forms of innovation thus helping them to situate teaching centrally in their careers It will also show them ways of solving students problems and methods of helping their students to learn more effectively THE FIRST YEAR AT UNIVERSITY Teaching Students in Transition The first year at university can be a very challenging time for students especially in a mass system of higher education Many students are ill equipped to cope with life at university and retention is now a critical metric for all universities This has resulted in universities having to spend

considerable time and attention on ensuring that the first year experience is as positive as possible for all students This book offers a range of practical strategies underpinned by relevant research which lecturers can implement when charged with working with first year students in order to ease their transition to higher education These strategies affect not only the design of courses teaching and assessment but also how teams of lecturers provide consistent support and how this in turn is supported by strategic planning at an institutional level The First Year at University is a practical resource that can be used by a wide range of lecturers including those undertaking the PGCE Higher Education as well as those on CPD courses on teaching and learning in higher education

What Teachers Need to Know Matthew Bruce Etherington,2017-03-31 Every generation has sought to make teaching and learning more inclusive and equitable but pesky questions always remain such as how can teaching and learning be conducted in ways that satisfies and respects everyone What are the parameters of an inclusive pedagogy Who defines its principles How should these principles be taught and by whom And by what authority shall they be grounded These types of thorny questions occupy the essence of educators and the authors of this book This book is about teachers educators and topics related to inclusion Teachers and educators have a lot to know therefore the topics are broad and relevant to the times What should teachers know about special needs religion and spirituality Aboriginality the environment tolerance and school choice Although teachers have knowledge of their subject matter knowledge alone is not sufficient They must know and understand how people learn A teacher must also care deeply about who they teach And this teacher knowledge grows and changes over time as teachers become more experienced informed skilled and wiser At the same time no teacher preparation will be sufficient because there will always be discussions that were never had and knowledge that was never shared Time has its costs and there is only so much a formal education can prepare someone This book helps to satisfy a cavity in learning for teachers and educators in general

Evidence-Based Practice in Educating Deaf and Hard-of-Hearing Students Patricia Elizabeth Spencer, Marc Marschark, 2010-07-21 Debates about methods of supporting language development and academic skills of deaf or hard of hearing children have waxed and waned for more than 100 years Will using sign language interfere with learning to use spoken language or does it offer optimal access to communication for deaf children Does placement in classrooms with mostly hearing children enhance or impede academic and social emotional development Will cochlear implants or other assistive listening devices provide deaf children with sufficient input for age appropriate reading abilities Are traditional methods of classroom teaching effective for deaf and hard of hearing students Although there is a wealth of evidence with regard to each of these issues too often decisions on how to best support deaf and hard of hearing children in developing language and academic skills are made based on incorrect or incomplete information No matter how well intentioned decisions grounded in opinions beliefs or value judgments are insufficient to guide practice Instead we need to take advantage of relevant emerging research concerning best practices and outcomes in educating deaf and hard of hearing learners In this critical evaluation of what we know and what we do not know about educating deaf and hard of hearing students the authors examine a wide range of educational settings and research methods that have guided deaf education in recent years or should The book provides a focus for future educational and research efforts and aims to promote optimal support for deaf and hard of hearing learners of all ages Co authored by two of the most respected leaders in the field this book summarizes and evaluates research findings across multiple disciplines pertaining to the raising and educating of deaf children providing a comprehensive but concise record of the successes failures and unanswered questions in deaf education A readily accessible and invaluable source for teachers university students and other professionals *Evidence Based Practice in Educating Deaf and Hard of Hearing Students* encourages readers to reconsider assumptions and delve more deeply into what we really know about deaf and hard of hearing children their patterns of
