Sign Language of the Deaf I. M. Schlesinger, Lila Namir, 2014-05-10 Sign Language of the Deaf Psychological Linguistic and Sociological Perspectives provides information pertinent to the psychological educational social and linguistic aspects of sign language This book presents the development in the study of sign language Organized into four parts encompassing 10 chapters this book begins with an overview of the fascinating account of sign language acquisition by small children This text then explores the grammar of sign language and discusses the linguistic status of natural and contrived sign languages Other chapters consider the many peculiarities of the lexicon and grammar of sign language and its differences in such respects from oral language This book discusses as well sign language from the angle of psycholinguistics The final chapter deals with the educational implications of the use of sign language This book is a valuable resource for linguists and psycholinguists Readers who are interested in sign language will also find this book useful Reference Sources Linda Mark, 1980 **The American Sign Language Handshape Dictionary** Richard A. Tennant, Marianne Gluszk Brown, 1998 Organizes 1 600 plus ASL signs by 40 basic hand shapes rather than in alphabetical word order This format allows users to search for a sign that they recognize but whose meaning they have forgotten or for the meaning of a new sign they have seen for the first time The entries include descriptions of how to form each sign to represent the varying terms they might mean Index of English glosses only Annotation copyrighted by Book News Inc Portland OR **Handling Periodic Signs in American Sign**

Language Using Synthetic Generation of Periods Himanshu Pahwa, 2010 American Sign Language or ASL is the dominant sign language of deaf people in United States and parts of Canada 500 000 to 2 million people use ASL as their primary language in United States ASL uses hands face and body with constantly changing movements and orientations Since the language is based on gestures not a printed alphabet it gets difficult to know the associated meaning given a video There are multimedia tools and dictionaries available to view a sign video for a given word but there are no dictionaries available which given a sign video will respond with corresponding word This egged on development of video based lookup in ASL dictionary The vision is to have a system in which a user will be able to find the meaning of an ASL sign simply by performing gesture in front of a video camera synced to a computer The computer will compare the unknown sign with a database of signs to identify the most likely matches In existing ASL lexicon project a user submits a query sign video and the application finds the most similar signs from the system database The existing system evaluates the similarity between the query video and every sign video in the database using Dynamic Time Warping DTW distance DTW is an algorithm for measuring similarity between two sequences which may vary in time or speed DTW is a method that allows a computer to find an optimal match between two given sequences e g time series with certain restrictions The sequences are warped non linearly in the time dimension to determine a measure of their similarity independent of certain non linear variations in the time dimension The existing ASL lexicon project uses the similarity in hand locations and orientations to lookup a gesture in dictionary of ASL signs The ability of DTW to cater to temporal misalignments helps us recognize signs differing in time or speed ASL periodic signs are signs which have repetition of an action The number of times this action is repeated is signer's discretion DTW in such cases will still attempt to align input video with the dictionary sign video The alignment will not be meaningful if the number of times an action is repeated in input video differs from dictionary sign video Since DTW in such case results in non meaningful association it ultimately results in poor similarity responses The paper attempts to correct this problem of Incorrect Period Matching The paper contributes by defining a protocol for annotating periodic signs and introduces a method for improving system accuracy on such signs It builds an informative database for periodic video signs on an ASL lexicon dataset of 1113 unique signs It captures the temporal information start and end of period for all the periods executed in each periodic sign video This paper provides a mechanism to generate periods synthetically We use the periodic temporal information of the last period to create subsequent periods for the training video We successfully corrected the problem which spurred while using DTW on periodic signs by synthetically generating periods
