lines derived from low grade organ confined cancers This gap can be filled with conditionally immortalized human cancer cell lines We do not know why the success rate for establishing cell lines is so low for some types of cancer and so high for others The histopathology of the tumor of origin and the extent to which the derived cell line retains the differentiated features of that tumor are critical The concept that a single cell line derived from a tumor at a particular site is representative of tumors at that site is naive and misleading Five Year Report United States-Japan Cooperative Medical Science Program,1975
