## **Nuffield Maths Nuffield Maths 5 11 Project:**

**Learning Mathematics** Anthony Orton, 2004-12-30 Why do some students achieve more than others Do we have to wait until pupils are ready Can children discover math for themselves Does language interfere with the learning of math This classic text written from the viewpoint of the math teacher provides answers to these and many more questions Each chapter explores a particular issue that illustrates the interaction between theory and practice New chapters have been included on cognition pattern and ICT

**Improving Teaching and Learning In the Core Curriculum** Kate Ashcroft, Professor Kate Ashcroft, John Lee, 2005-08-16 How can teachers respond creatively to the demands of the literacy and numeracy hours Can children be taught to behave like scientists How can teachers remain reflective and independent during this period of government direction

**Nuffield maths ~5 - 11œ [five to eleven]** Eric A. Albany, 1979 The Teaching Assistant's Guide Michelle Lowe, Jim Pugh, 2006-08-21 This textbook designed to meet the needs of foundation degree students provides an accessible overview of the teaching assistant's role incorporating practical tasks that will challenge students and improve their day to day practice

Twenty Years of Science and Mathematics Curriculum Development International Clearinghouse on Science and Mathematics Curricular Developments, 1977

Learning to Think Paul Light, Sue Sheldon, Martin Woodhead, 2014-04-23 The popular image derived from Piaget of the child as a solitary thinker struggling to construct a personal understanding of the mathematical and logical properties of the physical world has given way in recent years to a view of children's learning and thinking as embedded in social relationships This shift is here reflected in a set of readings which show the child being initiated into shared cultural understandings through close relationships with parents and teachers as well as siblings and peers

**Learning to Think** Martin Woodhead, Paul Light, 1991 A study in child psychology which presents a series of essays that examine how a child is initiated into shared cultural understanding through close relationships with parents and teachers as well as siblings and peers

*The Philosophy of Mathematics Education* Paul Ernest, 2002-11-01 Although many agree that all teaching rests on a theory of knowledge there has been no in depth exploration of the implications of the philosophy of mathematics for education This is Paul Ernest's aim Building on the work of Lakatos and Wittgenstein it challenges the prevalent notion that mathematical knowledge is certain absolute and neutral and offers instead an account of mathematics as a social construction This has profound educational implications for social issues including gender race and multiculturalism for pedagogy including investigations and problem solving and challenges hierarchical views of mathematics learning and ability Beyond this the book offers a well grounded model of five educational ideologies each with its own epistemology values aims and social group of adherents An analysis of the impact of these groups on the National Curriculum results in a powerful critique revealing the questionable assumptions values and interests upon which it rests The book finishes on an optimistic note arguing that pedagogy left unspecified by the National Curriculum is the way to achieve the radical aims of educating confident problem posers and solvers who are able to

critically evaluate the social uses of mathematics      *Curricular Needs of Slow Learners* W. K. Brennan, 2018-09-03 First published in 1979 This report discusses the existing practices of over 500 primary secondary and special schools with their special needs pupils The study outlines the variety of provisions facilities and equipment in the schools and the extent of use with slow learners It maps out the curricular activities in many organisational contexts and across all subject areas and discusses comparative strengths and weaknesses It relates the findings to the problems of improving the quality of education offered to slow learning pupils suggesting areas where improvement is needed and outlining possible new approaches

**Mathematical Enculturation** Alan Bishop, 2012-12-06 Mathematics is in the unenviable position of being simultaneously one of the most important school subjects for today's children to study and one of the least well understood Its reputation is awe inspiring Everybody knows how important it is and everybody knows that they have to study it But few people feel comfortable with it so much so that it is socially quite acceptable in many countries to confess ignorance about it to brag about one's incompetence at doing it and even to claim that one is mathophobic So are teachers around the world being apparently legal sadists by inflicting mental pain on their charges Or is it that their pupils are all masochists enjoying the thrill of self-inflicted mental torture More seriously do we really know what the reasons are for the mathematical activity which goes on in schools Do we really have confidence in our criteria for judging what's important and what isn't Do we really know what we should be doing These basic questions become even more important when considered in the context of two growing problem areas The first is a concern felt in many countries about the direction which mathematics education should take in the face of the increasing presence of computers and calculator related technology in society      **The British**

**National Bibliography** Arthur James Wells, 1991      *Teaching Mathematics* Michelle Selinger, 2013-10-31 In this reader maths teachers in the early years of their careers will find a concise yet comprehensive guide to developments in mathematics teaching in secondary schools and the controversies which currently surround it After a brief summary of the historical context a series of short articles provides a range of perspectives on various issues of current debate which will help new teachers in the development of their own teaching styles These include the impact of computers and calculators in maths teaching the various arguments about the use of published schemes and for more investigational approaches to the curriculum and the way in which social and cultural factors can be approached through the teaching of various topics in mathematics The final section looks at how teachers might continue their professional development through action research in their own classrooms      **Nuffield Maths 1** Eric A. Albany, Winifred Moore, 1979-07-01      ,      **The Australian**

**Mathematics Teacher** , 1989      **Research in Education** , 1974      *Resources in Education* , 1997      **"Dig where you stand"** 4 Kristín Bjarnadóttir, Fulvia Furinghetti, Marta Menghini, Johan Prytz, Gert Schubring, 2017-07-31 The Fourth International Conference on the History of Mathematics Education was hosted by Academy of Sciences and University of Turin Italy About 50 senior and junior researchers from 16 countries met for four days to talk about one topic the history of

mathematics education In total 44 contributions were presented The themes were Ideas people and movements Transmission of ideas Teacher education Geometry and textbooks Textbooks changes and origins Curriculum and reform Teaching in special institutions and Teaching of geometry In this volume you find 28 of the papers all of them peer reviewed Since the first international conference on the history of mathematics education the aim has been to develop this area of research to attract more researchers and provide new insights that stimulate further digging It is therefore very pleasing that so many new young researchers joined the conference presenting results from ongoing or recently finished PhD projects This makes us confident about a prosperous future of this research area as we look forward to the Fifth International Conference on the History of Mathematics Education to be held in Utrecht the Netherlands in September 2017 Previous international conferences on the history of mathematics education 2009 in Garaburri Iceland 2011 in Lisbon Portugal 2013 in Uppsala Sweden

**The National Union Catalogs, 1963-1964** *Three Dimensions* A. Treffers, 2012-12-06 In Dutch WISKOBAS stands for a particular kind of mathematics in the elementary school ages 6-12 In turn Wiskobas was one of the departments in the IOWO the Institute for the Development of Mathematics Education This institute was concerned with the development of material for mathematics education as well as the related research on the possibility of change from the then existing arithmetic instruction to the future mathematics education The present publication *Three Dimensions* has three aims to give a picture of the goals Wiskobas set for future mathematics education at the same time to show how such goals can be described and to show the theoretical framework of the Wiskobas curriculum The problem at hand is not at all simple What is more Wiskobas ideas about mathematics education cannot literally be translated into strings of words So how can we face the accusation that our objectives are unattainable and the goal itself irrational In order to avoid this vagueness as much as possible and for the sake of clarity this book makes continuous use of illustrations of mathematics education In these examples both the subject matter and the methods of description of the goals are illustrated as explicitly as possible while at the same time creating the opportunity to read between the lines The reader is urged to follow carefully the mathematical material at the start of each chapter This advice applies both to the more general education oriented and to the more mathematical didactical reader
