Introduction to Scientific Computing and Data Analysis Mark H. Holmes, 2023-07-11. This textbook provides an introduction to numerical computing and its applications in science and engineering. The topics covered include those usually found in an introductory course as well as those that arise in data analysis. This includes optimization and regression based methods using a singular value decomposition. The emphasis is on problem solving and there are numerous exercises throughout the text concerning applications in engineering and science. The essential role of the mathematical theory underlying the methods is also considered both for understanding how the method works as well as how the error in the computation depends on the method being used. The codes used for most of the computational examples in the text are available on GitHub. This new edition includes material necessary for an upper division course in computational linear algebra.

FAIR Jan Modersitzki, 2009-11-26. Whenever images taken at different times from different viewpoints and/or by different sensors need to be compared, merged or integrated, image registration is required. Registration, also known as alignment, fusion or warping, is the process of transforming data into a common reference frame. This book provides an overview of the state of the art registration techniques from theory to practice plus numerous exercises designed to enhance readers' understanding of the principles and mechanisms of the described techniques. It also provides via a supplementary Web page free access to FAIR, a package that is based on the MATLAB software environment which enables readers to experiment with the proposed algorithms and explore the presented examples in more depth.

Techniques in Microbial Ecology Robert S. Burlage, 1998. Microbial ecology is one of the fastest growing fields of microbiology.
