Taylor, 2012-12-06 In developing this book we decided to emphasize applications and to provide methods for solving problems As a result we limited the mathematical developments and we tried as far as possible to get insight into the behavior of numerical methods by considering simple mathematical models The text contains three sections The first is intended to give the fundamentals of most types of numerical approaches employed to solve fluid mechanics problems The topics of finite differences finite elements and spectral methods are included as well as a number of special techniques The second section is devoted to the solution of incompressible flows by the various numerical approaches We have included solutions of laminar and turbulent flow problems using finite difference finite element and spectral methods The third section of the book is concerned with compressible flows We divided this last section into inviscid and viscous flows and attempted to outline the methods for each area and give examples Numerical Methods in Laminar and Turbulent Flow Cedric Taylor, 1991
