Nutrients in Cancer Prevention and Treatment Kedar N. Prasad, Leonida Santamaria, R. Michael Williams, 2012-12-06

Nutrients in Cancer Prevention and Treatment contains articles that were presented by leading researchers and physicians in the field of nutritional oncology. Most of the previous conference proceedings on Nutrition and Cancer have dealt primarily with the issue of the role of nutrients in cancer prevention. This is logical because enormous quantities of laboratory and epidemiologic data have been published on the topic. Nutrients in Cancer Prevention and Treatment also contains several studies on the role of diet and vitamins in cancer treatment. There are very few books that have reviewed laboratory and clinical studies and the role of vitamins in cancer treatment. There are preliminary data suggesting that daily supplementation with high doses of certain vitamins in combination with conventional therapeutic agents may enhance their growth inhibitory effects on tumor cells and may protect normal tissues against some of their toxic effects. This book is unique in the sense that several articles have discussed the mechanisms of action of individual vitamins on cellular and molecular parameters. It is very exciting to note that some of the vitamins inhibit protein kinase C activity, increase the production of certain growth factors and modulate the expression of a number of oncogenes. These studies at least in part offer rationales for the cancer protective effects of vitamins.

Nutritional Oncology David Heber, Zhaoping Li, Vay Liang, 2021-08-23

Nutritional Oncology: Nutrition in Cancer Prevention, Treatment, and Survivorship presents evidence-based approaches to the study and application of nutrition in all phases of cancer, including prevention, treatment, and survivorship. There is a long history of interest in the role of nutrition in cancer, but only in the last 50 years has this interdisciplinary field developed scientific evidence from a combination of population studies, basic research, and clinical studies. Precision oncology, targeted therapies, and immunonutrition have led to advances in cancer treatment and prevention. Highlighting insights from Precision Oncology and Precision Nutrition to improve cancer prevention, treatment, and survival is the core mission of this book. The editors have over 40 years of clinical and research experience integrating science with practical advice based on available evidence for healthcare professionals while highlighting research vistas for the scientific community.

The Nutrition and Health series has been very fortunate to have each of the volumes recognized by rating services such as Doody's as valuable contributions for health professionals and individuals interested in the most up to date and balanced information from the experts in nutrition. These independent accolades may have occurred because the Nutrition and Health series has as its overriding mission to provide health professionals with texts that are considered essential because each book includes 1 a synthesis of the state of the science 2 timely in depth reviews by the leading researchers in their respective fields 3 extensive up to date fully annotated reference lists 4 a detailed index 5 relevant tables and figures 6 identification of paradigm shifts and the consequences 7 virtually no overlap of information between chapters but targeted inter chapter referrals 8 suggestions of areas for future research and 9 balanced data driven answers to patient questions which are based upon the totality of evidence rather than the findings of any single study. The series volumes are not the outcome of a symposium. Rather each editor has the potential to examine a chosen area with a broad perspective both

Nutrients and Cancer Prevention Kedar N. Prasad, Frank L. Meyskens Jr., 2012-12-06 During the last 10 years the role of specific nutrients in cancer prevention and cancer treatment has been the subject of intense basic preclinical and clinical research At present the major focus of nutritional oncology is on the mechanisms of carcinogenesis and their modification by nutrients and on cancer prevention studies in animals and humans Some human epidemiological studies have confirmed the hypothesis developed on animals that there is an inverse relation ship between the intake and or level of 3 carotene vitamin A vita min E or vitamin C and the risk of cancer whereas others have shown no such relationship This is not unexpected since the protective effect of individual nutrients may be too small to be detected by epidemiological methodologies in which a single vitamin or mineral is considered as one variable Conclusive evidence regarding the role of nutrients in human cancer prevention will come from a well designed human intervention study using one or more nutrients in a population that has a high risk of developing cancer The involvement of specific nutrients in the regulation of protooncogene expression has just begun Also some of the results of human intervention trials are beginning to yield interesting results A large number of interna tional scientists from various disciplines including cell biology mo lecular biology nutritional oncology epidemiology and public health reviewed and discussed their most recent findings The following topics were emphasized 1 Mechanisms of carcinogenesis 2
