**Nutrition, Aging, and the Elderly** D.E. Danford, H.N. Munro, 2013-11-11 The proportion of the population over 65 years of age is increasing steadily in most industrialized countries In the United States the proportion of elderly people has risen from four percent in 1900 to 11 % in 1978 and is projected to be 14% by the year 2000 The occurrence of debilitating chronic diseases in the elderly increases with each additional year These diseases along with the natural loss of tissue function that occurs throughout adult life impose a heavy burden on the health care system Nutri tion plays an important etiologic role in many of these degenerative changes Conse quently the aging segment of the population presents a challenge to the nutrition scientist who should be able to recommend optimal intakes of nutrients to minimize the functional losses associated with aging and to optimize the health of those already elderly This sixth volume in the series Human Nutrition A Comprehensive Treatise provides a conspectus of the various interactions of nutrition with the aging process and a comprehensive survey of current knowledge of the amounts of individual nutrients needed by the elderly The volume begins with a general survey of the multifaceted relationship of nutrition to aging followed by four chapters on how nutrition can affect age related changes in selected body functions The next six chapters cover the avail able evidence regarding the needs of the elderly for dietary energy protein calcium trace elements vitamins and fiber

**Nutritional Intervention in the Aging Process** H.J. Armbrecht, J.M. Prendergast, R.M. Coe, 2012-12-06 There has been much popular and scientific interest in the fields of nu trition and aging in recent years As the importance of proper nutrition in children and young adults becomes more fully understood it is natural to wonder if proper nutrition could playa similar role in later life Recent research has indicated that nutrition can potentially intervene in the ag ing process in at least two ways First studies in animals and humans have shown that nutrition can be used to improve functional status which in turn is related to perceived quality of life Second nutritional manipu lation has been used to extend maximal life span in laboratory animals How these interesting findings apply to the human situation remains to be explored The purpose of this book is twofold The first is to present recent ad vances in our basic knowledge of how nutrition and aging interact with each other The second is to discuss some applications of this knowledge to the care of the elderly patient The interaction between aging and nutrition is complex because each may act on the other in either a synergistic or antagonistic fashion Aging may alter the nutritional status of the elderly by affecting the way nu trients are absorbed and utilized by the body Aging may also influence food intake and therefore nutritional status by decreasing the palatabil ity of food The environment of the elderly may change so they are less likely to eat well balanced meals
