Postulates And Implications:

Postulates and Implications Ray Harbaugh Dotterer, 1955 Cogitations Jerrold J. Katz, 1988 Arguing that the problem with Descartes's Cogito ergo sum is a famous but controversial philosophical dictum lies in a deficiency in the theory of language and logic that Cartesian scholars have brought to the study of the Cogito Katz here proposes that the Cogito be understood as an example of analytic entailment a thesis according to which a statement can be a formally valid inference without depending on a law of logic

Koskinen, 2012-06-19 This edited volume is a comprehensive presentation of views on the relations between metaphysics and logic from Aristotle through twentieth century philosophers who contributed to the return of metaphysics in the analytic tradition The collection combines interest in logic and its history with interest in analytical metaphysics and the history of metaphysical thought By so doing it adds both to the historical understanding of metaphysical problems and to contemporary research in the field Throughout the volume essays focus on metaphysica generalis or the systematic study of the most general categories of being Beginning with Aristotle and his Categories the volume goes on to trace metaphysics and logic through the late ancient and Arabic traditions examining the views of Thomas Aquinas Duns Scotus and William Ockham Moving into the early modern period contributors engage with Leibniz's metaphysics Kant's critique of metaphysics the relation between logic and ontology in Hegel and Bolzano's views Subsequent chapters address Charles S Peirce's logic and metaphysics the relevance of set theory to metaphysics Meinong's theory of objects Husserl's formal ontology early analytic philosophy C I Lewis and his relation to Russell and the relations between Frege Carnap and Heidegger Surveying metaphysics through to the contemporary age essays explore W V Quine's attitude towards metaphysics Wilfrid Sellars's relation to antidescriptivism as it connects to Kripke's the views of Putnam and Kaplan Peter F Strawson's and David M Armstrong's metaphysics Trope theory and its relation to Popper's conception of three worlds The volume ends with a chapter on transcendental philosophy as ontology In each chapter contributors approach their topics not merely in an historical and exegetical fashion but also engage critically with the thought of the philosophers whose work they discuss offering synthesis and original philosophical thought in the volume in addition to very extensive and well informed analysis and interpretation of important philosophical texts The volume will serve as an essential reference for scholars of metaphysics and logic

The Content, Structure, and Operation of Thought Systems Robert S. Wyer, Jr., Thomas K. Srull, 2014-01-14 If anyone deserves the title father of social cognition it is William J McGuire who along with his wife and colleague Claire V McGuire has written the target article for this volume The culmination of many years of work the article discusses their highly developed theory of human thought systems and establishes many new directions for theoretical and

empirical inquiry Equally important however are the chapters written from many different theoretical and empirical perspectives that challenge various assumptions underlying the McGuire's work In addition to examining implications not explicitly considered in the target article these contributions explore the new directions that future research and theorizing might take

Essays in Economics Wassily Leontief, 1919-08-07 This work comprises the major papers of this extraordinary Nobel Laureate in economics The common concern of the papers included in this volume is economic theory its structure uses and abuses As the late Harry G Johnson said No one reading this volume can fail to be struck by the depth of scholarship Professor Leontief is capable of deploying and the profundity of his understanding of methodological problems of economic theory and his critique of the work of other economists

Dialectic Mortimer Jerome Adler, 1927 Principles of an Epistemology of Values Marià Corbí, 2015-10-12 This book addresses the need to create an axiological epistemology This term refers to knowledge of what is axiological i e everything related to human values and the know how on how to manage the study of values In knowledge societies we know and live axiological projects that we do not receive from anyone but that we must construct ourselves in a situation of continuous change In view of the fact that the axiological crisis in which we are immersed is the most serious one that humanity has suffered over its long history the seriousness and urgency of the issue in question is evident Adequate knowledge is required to solve this problem which is at the root of all the problems we are experiencing This work offers a potential solution that in contrast to the past cannot be definitive but must be transformed throughout the continuous changes to ways of life as a result of technoscience It will prove of great value to all those who must operate within human values and motivate groups as well as to those interested in spirituality

Memory and Cognition in Its Social Context Robert S. Wyer, Jr., Thomas K. Srull, 2014-02-04 The first comprehensive theoretical formulation of the way people use information they receive about their social environments to make judgments and behavioral decisions this volume focuses on the cognitive processes that underlie the use of social information These include initial interpretation the representations used to make inferences and the transformation of these subjective inferences into overt judgment and behavior In addition it specifies the role of affect and emotion in information processing and the role of self knowledge at different stages of processing The theoretical model presented here is the first to provide a conceptual integration of existing theory and research in all phases of social information processing It not only accounts for the major portion of existing research findings but permits several hypotheses to be generated concerning phenomena that have not yet been empirically investigated Although focused here on the processing of information about people and events the formulation proposed has implications for other domains such as personnel appraisal political decision making and consumer behavior

The Methodology of Positive Economics Uskali Mäki, 2009-05-28 Milton Friedman's 1953 essay *The methodology of positive economics* remains the most cited influential and controversial piece of methodological writing in twentieth century economics. Since its appearance the essay has shaped the image of economics as a scientific discipline both within and outside of the academy. At the same time there has been an ongoing controversy over the proper interpretation and normative evaluation of the essay. Perceptions have been sharply divided with some viewing economics as a scientific success thanks to its adherence to Friedman's principles, others taking it as a failure for the same reason. In this book a team of world renowned experts in the methodology of economics cast new light on Friedman's methodological arguments and practices from a variety of perspectives. It provides the 21st century reader with an invaluable assessment of the impact and contemporary significance of Friedman's seminal work.
