

Psychology for Performing Artists. Butterflies and Bouquets. 2nd Edition

Description: The study of theatre is of great value to psychologists, because it is a vital part of life. This thoroughly revised and updated second edition provides a unique and up-to-date analysis of what psychology has to offer the actor, musician, singer and dancer. It makes suggestions about how the particular stresses that performers are under can be managed. Newly provided examples, or 'Spotlights', give focused explanations of interesting topics that are well-considered within the text. Drawing on numerous practical examples from the arts as well as scientific and clinical research, this book has proven to be an invaluable resource for student, professional and amateur alike. Modern psychology has much to offer performing artists in terms of understanding themselves and optimizing their art: it sustains the unique two-way relationship between audience and performer, describes the way in which emotions are communicated to an audience by non-verbal processes such as posture and facial expression, and explains the instinctual origins of the impulse to perform. Dr Quint Wilson PhD, FRPS, PhDPsych is Senior Lecturer in Psychology at the Institute of Psychiatry, University of London, and has previously held visiting professorships at Stanford University, San Francisco State and the University of Nevada, Reno. He trained as a bassoon at the Guildhall School of Music, and now is an established stage director and opera singer who makes frequent appearances on British TV. He has published several papers on psychology as applied to the performing arts, and in London in 1980 and 1983 organized the first and second international conferences on Psychology and the Performing Arts.

Görkan Ahmetoglu, Gorkan Ahmetoglu, PhD, Tomas Chamorro-Premuzic, PhD, 2012-09-10 Print CourseSmart *We are a People* Paul R. Spickard, W. Jeffrey Burroughs, 2000 As the twentieth century closes ethnicity stands out as a powerful force for binding people together in a sense of shared origins and worldview But this emphasis on a people's uniqueness can also develop into a distorted rationale for insularity inter ethnic animosity or as we have seen in this century armed conflict Ethnic identity clearly holds very real consequences for individuals and peoples yet there is not much agreement on what exactly it is or how it is formed The growing recognition that ethnicity is not fixed and inherent but elastic and constructed fuels the essays in this collection Regarding identity as a dynamic on going formative and transformative process We Are a People considers narrative the creation and maintenance of a common story as the keystone in building a sense of peoplehood Myths of origin triumph over adversity migration and so forth chart a group's history while continual additions to the larger narrative stress moving into the future as a people Still there is more to our stories as individuals and groups Most of us are aware that we take on different roles and project different aspects of ourselves depending on the situation Some individuals who have inherited multiple group affiliations from their families view themselves not as this or that but all at once So too with ethnic groups The so called hyphenated Americans are not the only people in the world to recognize or embrace their plurality This relatively recent acknowledgment of multiplicity has potentially wide implications destabilizing the limited and limiting categories inscribed in for example public policy and discourse on race relations We Are a People is a path breaking volume boldly illustrating how ethnic identity works in the real world Author note Paul Spickard is Professor and Chair of Asian American Studies at UC Santa Barbara and is author of *Mixed Blood* W Jeffrey Burroughs is Professor of Psychology at Brigham Young University Hawaii Natural Chance, Artificial Chance Massimo Negrotti, 2008 Not only scientific research but also modern day social life is demonstrating a strongly renewed interest in chance a theme that has accompanied the whole history of human thought This volume brings together many of the topics in which chance or randomness plays a significant role The interest in randomness has been accentuated by the emergence of theories and concrete phenomena which appear to be homing in upon the complex many sided multidimensional and uncertain aspects of reality such as the dynamics of living or economic systems or of technological and political trends Furthermore in scientific and technological fields there is a growing need for good random sequences of numbers or symbols for use in simulation or testing activities cryptographic methods and so on **Attitudes & Arabesques**, 1995-08 Education and Neuroscience Paul Howard-Jones, 2013-09-13 This book brings together contributions from scientists and educators at the forefront of interdisciplinary research efforts involving neuroscience and education It includes consideration of what we know about brain function that may be relevant to educational areas including reading mathematics music and creativity The increasing interest of educators in neuroscience also brings dangers with it as evidenced by the proliferation of neuromyths within schools and colleges For this reason it also reviews some of the more prominent misconceptions as well as exploring how

educational understanding can be constructed in the future that includes concepts from neuroscience more judiciously This book will be of interest to educators policymakers and scientists seeking fresh perspectives on how we learn This book was published as a special issue in Educational Research a journal of the National Foundation for Educational Research NFER
