Reoperations In Cardiac Surgery:

Reoperations in Cardiac Surgery Jarda Stark, Al Pacifico, 2012-12-06 Nearly a century has passed since Rehn performed the first successful cardiac operation by closing a right ventricular stab wound in a gravely ill patient Moreover it has been more than fifty years since Gross successfully corrected the first congenital cardiac malformation in 1938 by suture ligation of a patent ductus arteriosus The introduction of the Blalock operation for tetralogy of Fallot by Blalock in 1944 greatly advanced the management and prognosis of a critically ill group of cardiac patients and the success of this procedure further stimulated the development of concepts and techniques for the surgical management of other severe congenital cardiac defects Until the successful use of extracorporeal circulation by Gibbon in 1953 it was often necessary to perform cardiac operations which were palliative rather than curative procedures With the advent of additional new and improved techniques correction of many hitherto incurable cardiac disorders became possible and reoperation under these circumstances became frequent Cardiac surgery is very fortunate in having two master surgeons whose distinctive contributions and clinical proficiency are recognized worldwide to edit this extraordinary and unique text They have placed emphasis on a number of specific complications of primary cardiac procedures which lead to the necessity for reoperation Problems associated with postoperative infections thrombotic disorders stenoses of suture lines deterioration of prosthetic materials and mechanical valves rejection of transplanted organs and tissues and a host of additional complications are described together with their appropriate surgical management

Redo Cardiac Surgery in Adults V.R. Machiraju, Hartzell V. Schaff, Lars G. Svensson, 2011-12-02 Redo cardiac surgeries are challenging cases with a myriad of influential factors ranging from the patient's pathology to the whimsy of the previous surgeon. *Redo Cardiac Surgery in Adults* 2nd Edition clearly outlines practical approaches, surgical techniques, and management of associated conditions such as perioperative stroke and acute kidney function. It covers the spectrum of redo cardiac operations including coronary artery bypass, mitral valve repair, reoperation for prosthetic mitral valve endocarditis, aortic arch reoperation, descending and thoracoabdominal aortic reoperation, and reoperations following endovascular aortic repair. All redo cardiac surgeries present a complex array of challenges beyond what the original procedure demands. This book, written by an outstanding group of prominent physicians, will give the reader the knowledge and tools to approach these cases with confidence.

Advanced Therapy in Cardiac Surgery Kenneth L. Franco, Edward D. Verrier, 2003 *Advanced Therapy in Cardiac Surgery* Second Edition This second edition of *Advanced Therapy in Cardiac Surgery* presents state-of-the-art techniques and an in-depth review of cardiac surgery from the leading authorities. Each of the 62 succinct chapters represents the personal treatment protocols of the experts. *The Advanced Mastery of Cardiothoracic Surgery* Larry R. Kaiser, Irving L. Kron, Thomas L. Spray, 2013-12-24 Completely revised and updated, this third edition presents a comprehensive guide to all cardiothoracic surgical procedures for adults and children. More than 130 of the world's master surgeons describe their techniques step by step and explain the decision making that is crucial to a successful outcome.

Overview of Cardiac Surgery for the Cardiologist Richard T. Lee, Pamela S. Peigh, Thomas H. Lee, 2012-12-06 The motivation for this book was the recognition by two of us (RL and TL) that despite our training as cardiologists we had a limited understanding of many aspects of the surgical management of our patients. Conversations with other cardiologists at our own institution and at other medical centers around the country convinced us that many of our colleagues shared our uncertainty about the details of surgical procedures and the factors that determine decisions in the perioperative period. As surgical techniques continue to evolve, this knowledge gap can become only more severe. We therefore compiled information about cardiac surgery that might be useful for cardiologists and other nonsurgeons. We asked cardiologists what questions they would like to ask their surgical colleagues and provided these questions to the authors of the chapters. Thus the goal of these chapters is to help nonsurgeons answer their own questions about common cardiac procedures and to help prepare these physicians to address the questions raised by their patients. In addition, we hope that insight into these issues will improve communication between surgeons and their colleagues and ultimately lead to better patient care.
