

Surviving disaster – The Titanic and SOLAS

In 1914, two years after the Titanic disaster of 1912, in which 1,503 people lost their lives, maritime nations gathered in London adopted the International Convention for the Safety of Life at Sea (SOLAS Convention), taking into account lessons learned from the Titanic. The 1914 version was superseded by SOLAS 1929, SOLAS 1948, SOLAS 1960 (the first adopted under the auspices of the International Maritime Organization) and SOLAS 1974. SOLAS 1974 is still in force today, but it has been amended and updated many times. The regulations relating to life saving appliances and arrangements, contained in chapter II of SOLAS, a new version of which entered into force on 1 July 1988, are intended to ensure that in the event of a catastrophe at sea, passengers and crew have the greatest chances of survival. Improved design and equipment, better fire protection, satellite communications, rescue planes and helicopters and trained personnel also contribute to improved safety at sea.

Speed of navigation around ice
The Convention on the Titanic ruled the ship was due to collide with an iceberg brought about by excessive speed at which she was being navigated.
Under SOLAS, when ice is reported or is seen the vessel must reduce speed or alter course to proceed at a moderate speed or alter course.

Ice patrol
In the late SOLAS 1974, after the Titanic disaster, ice patrols in the north Atlantic were set up and intended to be a SOLAS requirement.

Public address system
There was no public address system on the Titanic and most feared for the passengers' safety, adding to the disaster and confusion.
Under SOLAS, all passenger ships must be fitted with a public address system.

Lifeboat design
Some people died from hypothermia in the Titanic lifeboats because they were open and gave no protection against the cold.
Under SOLAS, lifeboats must be fully or partially enclosed. On passenger ships, fully enclosed lifeboats can be used as they are easier to get into, but they must have a collapse roof for bad weather.

Training of crew in lifeboat drill
The crew of the Titanic received training in loading and lowering the lifeboats and the order which crew they were assigned to.
Lifeboats were not filled in capacity because senior officers did not know the boats had never loaded and were strong enough.
Under SOLAS, every crew member must participate in regular practice drills and have easy access to training manuals.

Distress alert
The Titanic used radio which had a limited range of 200 nautical miles. When out of range, communication probably via postcard.

Helicopters and rescue planes
Inventions in 1912, helicopters and rescue planes are now used to rescue people at sea and rescue survivors.

Lifeguard drill
No lifeguard drill was run on the Titanic. Under SOLAS chapter II an abandon ship drill must take place every 30 days of passenger ships.

Evacuation routes
Passengers on the Titanic jumped from windows and clung onto the railings as they were lowered, often injuring themselves or other passengers.
Now emergency evacuation routes are both safer and quicker.

Number of lifeboats
The Titanic did not have enough lifeboats for all passengers.
Under SOLAS, passenger ships must carry enough lifeboats, number of which can be calculated by formula for all passengers, plus 10% for 20%.

Location
The registration on Cape Horn, Newfoundland and other other than the Caribbean and the Atlantic. After the Titanic disaster, it was the shipping world and the Titanic's position and movement were tracked. GPS and global positioning systems, the position of a ship or distress can be automatically sent.

The Vignette
Rescue planes left at 10 miles. Transfer of data and position to the ship at 10 miles.
The Callerton
Rescue planes left at 10 miles. Transfer of data and position to the ship at 10 miles.
The Titanic
Rescue planes left at 10 miles. Transfer of data and position to the ship at 10 miles.

Distress watch
The Callerton was less than 10 miles away but the radio officer had gone off duty when the distress messages were sent.
Under SOLAS, every ship while at sea must maintain a continuous watch on the distress and safety frequencies.

Subsistence suits
The sea temperature when the Titanic sank was below freezing point and many people died in the water from hypothermia.
Under SOLAS, a specific number of immersion suits must be carried on each passenger and cargo ship, ready for the crew of rescue boats.
