Representation And Processing Of Compound Words:

The Representation and Processing of Compound Words Gary Libben, Gonia Jarema, 2005-11-24 This book presents new work on the psycholinguistics and neurolinguistics of compound words. It shows the insights this work offers on natural language processing and the relation between language, mind and memory. Compounding is an easy and effective way to create and transfer meanings. By building new lexical items based on the meanings of existing items, compounds can usually be understood on first presentation though as say breadboard, cardboard, cupboard and sandwich board show the rules governing the relations between the components, meanings are not always straightforward. Compound words are segmentable into their constituent morphemes in much the same way as sentences can be divided into their constituent words; children and adults would not otherwise find them interpretable. But compound sequences may also be independent lexical items that can be retrieved for production as single entities and whose idiosyncratic meanings are stored in the mind. Compound words reflect the properties both of linguistic representation in the mind and of grammatical processing. They thus offer opportunities for investigating key aspects of the mental operations involved in language, for example the interplay between storage and computation, the manner in which morphological and semantic factors impact on the nature of storage and the way the mind's computational processes serve on-line language comprehension and production. This book explores the nature of these opportunities, assesses what is known and considers what may yet be discovered and how. **The**

Pandeirada, Joshua VanArsdall, 2024-11-19 People and animals broadly animates are important dynamic forces in the natural world They represent social targets such as friends and enemies economic and romantic partners predators and prey and companions Most importantly unlike inanimate objects animate agents have internal goals and drives that cause them to act on the world rather than simply be acted on In short animates fill our world with novel causes and have been a consistent selection pressure over the course of evolution human and nonhuman Cognitive scientists have long acknowledged the importance of animacy investigating it as a perceptual phenomenon as a component of language a natural category a demand on attention a dimension of neurological organization and more recently as an important factor in memory Although animacy has been a dimension of interest in cognitive science for quite some time cognitive scientists from different subdisciplines interested in animacy e g perception attention language and memory rarely talk with one another to synthesize findings across subfields A major goal of this research topic is to solicit articles from across cognitive science in a broad sense that investigate the role that animacy plays in cognition in the hopes that authors and readers may begin to see the bigger picture regarding how animacy influences the mind We hope that by bringing together researchers from across cognitive science we will hear from a diverse set of perspectives regarding animacy representing a variety of research questions and methodologies within this larger topic Likewise we hope that the finished research topic will lead to an increased and more varied exploration of the role of animacy in our thoughts and actions and will appeal to readers across fields
