Representation Theory And Noncommutative Harmonic Analysis:

Aspects Of Representation Theory And Noncommutative Harmonic Analysis Jean H Gallier, Jocelyn Quaintance, 2025-01-17 This book presents the theory of harmonic analysis for noncommutative compact groups If G is a commutative locally compact group there is a well understood theory of harmonic analysis as discussed in *Aspects of Harmonic Analysis on Locally Compact Abelian Groups* If G is not commutative things are a lot tougher In the special case of a compact group there is a deep interplay between analysis and representation theory which was first discovered by Hermann Weyl and refined by Andre Weil This book presents these seminal results of Weyl and Weil Starting with the basics of representations theory it presents the famous Peter Weyl theorems and discusses Fourier analysis on compact groups This book also introduces the reader to induced representations of locally compact groups induced representations of G bundles and the theory of Gelfand pairs A special feature is the chapter on equivariant convolutional neural networks CNNs a chapter which shows how many of the abstract concepts of representations analysis on compact groups Peter Weyl theorems Fourier transform induced representations are used to tackle very practical modern day problems

Representation Theory and Noncommutative Harmonic Analysis II Alexandre Kirillov, 2012-12-22 Two surveys introducing readers to the subjects of harmonic analysis on semi simple spaces and group theoretical methods and preparing them for the study of more specialised literature This book will be very useful to students and researchers in mathematics theoretical physics and those chemists dealing with quantum systems

Homogeneous Spaces, Representations and Special Functions, *Representation Theory and Noncommutative Harmonic Analysis I* A.A. Kirillov, 2013-03-09 Part I of this book is a short review of the classical part of representation theory The main chapters of representation theory are discussed representations of finite and compact groups finite and infinite dimensional representations of Lie groups It is a typical feature of this survey that the structure of the theory is carefully exposed the reader can easily see the essence of the theory without being overwhelmed by details The final chapter is devoted to the method of orbits for different types of groups Part II deals with representation of Virasoro and Kac Moody algebra The second part of the book deals with representations of Virasoro and Kac Moody algebra The wealth of recent results on representations of infinite dimensional groups is presented

Representation Theory and Noncommutative Harmonic Analysis I Alexandre Kirillov, 2014-03-12 This two part survey provides a short review of the classical part of representation theory carefully exposing the structure of the theory without overwhelming readers with details and deals with representations of Virasoro and Kac Moody algebra It presents a wealth of recent results on representations of infinite dimensional groups

Representation Theory and Noncommutative Harmonic Analysis II A.A. Kirillov, 2013-03-09 At first only elementary functions were studied in mathematical analysis Then new functions were introduced to evaluate integrals They were named special functions integral sine logarithms the exponential function the probability integral and so

on Elliptic integrals proved to be the most important They are connected with rectification of arcs of certain curves The remarkable idea of Abel to replace these integrals by the corresponding inverse functions led to the creation of the theory of elliptic functions They are doubly periodic functions of a complex variable This periodicity has led to consideration of the lattice of periods and to linear fractional transformations of the complex plane which leave this lattice invariant The group of these transformations is isomorphic to the quotient group of the group $GL(2, \mathbb{Z})$ of unimodular matrices of the second order with integral elements with respect to its center Investigation of properties of elliptic functions led to the study of automorphic functions and forms This gave the first connection between the theory of groups and this important class of functions The further development of the theory of automorphic functions was related to geometric concepts connected with the fact that the group of linear fractional transformations with real elements can be realized as the group of motions of the Lobachevskij plane We also note that at the beginning of the 19 century Gauss used the group $GL(2, \mathbb{Z})$ in his papers on the theory of indeterminate quadratic forms

Noncommutative Harmonic Analysis Michael Eugene Taylor, 1986 Explores some basic roles of Lie groups in linear analysis with particular emphasis on the generalizations of the Fourier transform and the study of partial differential equations

Perspectives of Representation Theory and Noncommutative Harmonic Analysis, 2013 *Noncommutative Harmonic Analysis* Patrick Delorme, 2004 Dedicated to Jacques Carmona an expert in noncommutative harmonic analysis the volume presents excellent invited refereed articles by top notch mathematicians Topics cover general Lie theory reductive Lie groups harmonic analysis and the Langlands program automorphic forms and Kontsevich quantization Good text for researchers and grad students in representation theory
