Representing And Intervening Introductory Topics In The Philosophy Of Natural Science:

Representing and Intervening Ian Hacking, 1983-10-20 A lively and clearly written introduction to the philosophy of natural science organized around the central theme of scientific realism

Representing and Intervening Ian Hacking, 1987

Representing and Intervening Ian Hacking, 1988 *Phenomenalism, Phenomenology, and the Question of Time* Adam Berg, 2015-12-15 Phenomenalism Phenomenology and the Question of Time A Comparative Study of the Theories of Mach Husserl and Boltzmann analyzes two interconnected themes the split between phenomenalism and phenomenology and the question of time in relation to physical processes and irreversibility in physics The first theme is the overlooked connections between the modern phenomenology of Edmund Husserl and his mentor Franz Brentano and phenomenalism as associated with Ernst Mach The book s historical conceptual perspective draws attention to the ways in which Husserl s twentieth century advance of phenomenological method was conceived in relation to Mach s late nineteenth century and early twentieth century work both in science and philosophy At first glance Mach s phenomenalism appears to be in stark contrast to Husserl s phenomenology but on closer inspection it influenced and informed its inception By analyzing Husserl s revolutionary method of phenomenology in connection to Mach s earlier conceptions the book elucidates the rise of modern physics especially through the work of Ludwig Boltzmann as an important context to both Mach s philosophical work and Husserl s early overtures into phenomenology and his later critique of the crisis of European sciences The discursive affinities and differences between phenomenalism and phenomenology are examined in terms of a more contemporary debate over naturalizing phenomenology either as a method continuous with science or reduced to it This immanent tension is examined and evaluated specifically through the second thematic axis of the book which deals with the question of time and irreversibility Time in physics conforms to an explanatory scheme that relegates the issues of directionality and symmetry of time to concepts that are radically different from any phenomenological attempts to explain temporality in terms of intuition and consciousness It is precisely through the notion of irreversibility that both perspectives scientific and phenomenological explicate time s arrow not as a mere manifestation of sensory asymmetry as Mach would have it but rather through indirect descriptions of time and temporal objects The issue of time s arrow irreversibility and Boltzmann s physical hypotheses regarding the nature of time are introduced and comparatively assessed with Husserl s work on phenomenology and the role of temporality to consciousness

National Science Education Standards National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, National Committee on Science Education Standards and Assessment, 1996-01-07 Americans agree that our students urgently need better science education But what should they be expected to know and be able to do Can the same expectations be applied across our diverse society These and other fundamental issues are addressed in National Science Education Standards a landmark development effort that reflects the contributions of thousands of teachers scientists science educators and other experts

across the country The National Science Education Standards offer a coherent vision of what it means to be scientifically literate describing what all students regardless of background or circumstance should understand and be able to do at different grade levels in various science categories The standards address The exemplary practice of science teaching that provides students with experiences that enable them to achieve scientific literacy Criteria for assessing and analyzing students attainments in science and the learning opportunities that school science programs afford The nature and design of the school and district science program The support and resources needed for students to learn science These standards reflect the principles that learning science is an inquiry based process that science in schools should reflect the intellectual traditions of contemporary science and that all Americans have a role in improving science education This document will be invaluable to education policymakers school system administrators teacher educators individual teachers and concerned parents

Creating Scientific Controversies David Harker, 2015-10 This is the first book length introductory study of the concept of a created scientific controversy providing a comprehensive and wide ranging analysis for students of philosophy of science environmental and health sciences and social and natural sciences *Giants Upon Our Shoulders: A Philosophical History of Physics in Uruguay* Juan A. Queijo Olano, Evelyn Mozo Meneses, 2025-07-30 This book offers the hitherto unknown history of physics in Uruguay To describe this history it is necessary to take a broader view of the first Latin American attempts at research in physics These first researchers dedicated to the understanding of physics received the giants achievements of the discipline from Europe or the United States but all they could do was find ways to preserve most of this knowledge Thus instead of thinking of science as an international enterprise in which all members participate with the same goal of looking far ahead this book reflects on the real circumstances of Uruguayan and Latin American scientists who were willing to become part of the international communities but did not have the proper training resources and cultural support to do so That s why the history contained in this book is mixed with some philosophical problems about the real nature of the practice of physics and science in general The mainstream definitions of scientific activity or the proper concept of science should be adapted to material conditions and different kinds of aims and proposals This book explores based on the history of physics in Uruguay and Latin America new standards of the scientific itself making it of great interest to historians and philosophers of science and those interested in the history of Latin America and Uruguay in particular *Research ,*

Philosophical Perspectives in Quantum Chemistry Olimpia Lombardi, Juan Camilo Martínez González, Sebastian Fortin, 2022-05-16 This book explores the philosophy and the foundations of quantum chemistry It features chapters written by experts in the field The contributions analyze quantum chemistry as a discipline in particular its relation with both chemistry and physics from the viewpoint of realism and reduction Coverage includes such topics as quantum chemistry as an in between discipline molecular structure and quantum mechanics quantum chemical models and atoms and molecules in quantum chemistry The interest of this book is twofold First the contributions aim to update and refresh the discussions

regarding the foundations of quantum chemistry Second they seek to develop new philosophical perspectives that this discipline can suggest to philosophers of science From its origins quantum chemistry filled a problematic position in the disciplinary space On the one hand it is a branch of theoretical chemistry On the other hand it appeals essentially to theoretical tools coming from physics This peculiar position triggered conceptual questions about its own identity Inside this book readers will find updated discussions on the foundations and the philosophy of this complex discipline *Kuhn's Intellectual Path* K. Brad Wray, 2021-09-30 Examines the influences on and impact of Thomas Kuhn's *The Structure of Scientific Revolutions*
