Cultures of Relatedness Janet Carsten, 2000-03-09 Our understanding of what makes a person a relative has been transformed by radical changes in marriage arrangements and gender relations and by new reproductive technologies We can no longer take it for granted that our most fundamental social relationships are grounded in biology or nature These developments have prompted anthropologists to take a fresh look at idioms of relatedness in other societies and to review the ways in which relationships are symbolised and interpreted in our own society Defamiliarizing some classic cases challenging the established analytic categories of anthropology the contributors to this innovative book focus on the boundary between the biological and the social and bring into question the received wisdom at the heart of the study of kinship
