Reproduction In Mammals 1 6:

Reproduction in Mammals Virginia Hayssen, Teri J. Orr, 2017-10-27 A fascinating look at the diverse reproductive strategies of numerous female mammals from hyenas to goats kangaroos to whales Newborn mammals can weigh as little as a dime or as much as a motorcycle Some receive milk for only a few days whereas others nurse for years Humans typically have only one baby at a time following nine months of pregnancy but other mammals have twenty or more young after only a few weeks in utero What causes this incredible reproductive diversity In *Reproduction in Mammals* Virginia Hayssen and Teri J Orr present readers with a fascinating examination of the varied reproductive strategies of a broad spectrum of mammals from marsupials to whales This unique book s comprehensive coverage gathers stories from many taxa into a single cohesive perspective that centers on the reproductive lives of females The authors shed light on a number of intriguing questions including do bigger moms have bigger babies do primates have longer pregnancies than other groups does habitat influence animals reproductive patterns do carnivores typically produce larger litters than prey species The book opens with the authors definition of what constitutes a female perspective and an examination of the evolution of reproduction in mammals It then outlines the typical individual mammalian female her genetics anatomy and physiology Taking a nuanced approach Hayssen and Orr describe the female reproductive cycle and explore female mammals interactions with males and offspring Readers will come away from this thought provoking book with an understanding of not only how reproduction fits into the lives of female mammals but also how biology has affected the enormously diverse reproductive patterns of the phenotypes we observe today

Methods in Mammalian Reproduction Joseph C. Jr. Daniel, 2012-12-02 *Methods in Mammalian Reproduction* presents some of the techniques for manipulating analyzing observing testing and generally experimenting with mammalian mothers and their gametes and embryos Mammalian reproduction involves an intimate relationship between mother and embryo The first 18

chapters are arranged in an order that follows a developmental sequence from oocyte to fetal organs and the remaining seven chapters deal with the maternal side of the relationship. With strong focus on laboratory rodents and lagomorphs the book starts with an introduction to in vitro oocyte maturation and experimental production of mammalian parthenogenetic. It goes on to describe the microtechniques in pre implantation of embryos, production of chimeras, techniques for early embryonic tissue separation, mammalian embryo preservation by freezing and in vitro development of whole mouse embryos beyond the implantation stage. Chapters 11-15 discuss the in vitro implantation of mouse blastocysts, advances in rabbit embryo and in large mammal embryo cultures, embryo transfer in large domestic mammals and manipulation of marsupial embryos and pouch young. The following chapters cover reproduction experiments using marsupials, domestic farm species and primates including humans. Finally the concluding chapters tackle the use of amniocentesis in prenatal diagnosis, collection and analysis of female genital tract secretions, analysis of antifertility action of intrauterine devices and surgical induction of endometriosis. This book will be helpful to students, teachers, researchers and clinical researchers who demand for more and better procedures for analysis of mammalian reproduction.

Microfluidics for Assisted Reproduction in Animals Vinod Kumar Yata, 2021-02-26. This book describes the fundamentals of microfluidics and fabrication methods of microfluidic devices that can be adopted for animal assisted reproduction. It presents microfluidic methods for sorting highly fertile spermatozoa. This book also describes the application of microfluidics in vitro fertilization and embryo culture. It discusses the use of microfluidics in sperm sexing and the cryopreservation of animal gametes and embryos. Lastly the book examines the potential opportunities of microfluidics in infertility diagnosis, sperm selection and guidance, oocyte selection, insemination and embryo monitoring.

Asdell's Patterns of Mammalian Reproduction Virginia Douglass Hayssen, Ari Van Tienhoven, Ans Van Tienhoven, 1993. Since the appearance of the second edition of Sydney A Asdell's widely used *Patterns of Mammalian Reproduction* in 1964 the field of reproductive physiology has expanded dramatically. Accordingly this revision adopts a different structure from previous editions substituting empirical delineations for physiological interpretations. With the emphases now on a presentation of the published facts of mammalian reproduction it provides a thorough compilation of what is known about the basic reproductive biology of each of the 4300 mammalian species. To gather information the authors examined more than 20 000 publications dating up to 1992. They used primary sources as much as possible supplementing them with English translations of Russian, Finnish, Chinese and Japanese journals. The data are presented in taxonomic order. Each familial account summarizes the pattern of reproduction for the family and provides lists of citations arranged by topic of the literature on the endocrinology, reproductive anatomy and reproductive physiology of the family. Following each account is a tabular listing of species specific data for neonatal mass and size, weaning mass and size, litter size, age at sexual maturity, estrous cycle length, gestation length, lactation length, number of litters per year and seasonality of reproduction. For each of these reproductive variables the range of data gleaned from the literature is given.

together with the source of each value listed Virginia Hayssen is Assistant Professor of Biology at Smith College Ari Van Tienhoven is Professor of Animal Physiology Emeritus at Cornell University Ans Van Tienhoven assisted in the compilation of data for the book *4000 Quizzes* Pustak Mahal Editorial Group, 2002-04-05 It is a common sentiment expressed by many students from time to time The answer to this is simple Taking an exam is an art and only he who approaches the task in a more systematic and scientific manner comes out a winner One common aspect of the exam taking strategy is revision The ability to answer random questions about your subject can clearly demonstrate the extent of your preparation Now this book makes revision easier and convenient for all science students Written by leading experts in the field it helps students with quick revisions in one line questions with one word answers *The Ecology of Reproduction in Wild and Domestic Mammals* R.M. Sadler, 2012-12-06 49 about six months to well over a year If there is only one part of the year that is favourable such as spring and early summer in the temperate climates then each species must make an evolutionary choice so to speak as to which parts of the reproductive cycle conception gestation lactation or weaning must be protected and which can come in less favourable times of the year The rhesus and langur monkeys of northern India give birth during the time of year when temperatures are hottest and wells and tanks are often dry However gestation and the later months of lactation come during the monsoon season when food and water are abundant In contrast the east African baboons give birth at the beginning of the small rains and gestation and the late part of lactation occur during the six months dry season Whether any pattern of relationship will be found to hold true for other species of primates is still not clear It may be that a wide variety of patterns have evolved depending on the lengths of gestation and lactation and the particular ecological complex in which each species or even subspecies lives pages 503 504 *Cumulated Index Medicus*, 2000 *Catalog of Educational Captioned Films/videos for the Deaf*, 1993 **Reproduction in Farm Animals** E.
