experiments in economics The first chapter provides an introduction to experimental economics as a whole with the remaining chapters providing surveys by leading practitioners in areas of economics that have seen a concentration of experiments public goods coordination problems bargaining industrial organization asset markets auctions and individual decision making The work aims both to help specialists set an agenda for future research and to provide nonspecialists with a critical review of work completed to date Its focus is on elucidating the role of experimental studies as a progressive research tool so that wherever possible emphasis is on series of experiments that build on one another The contributors to the volume Colin Camerer Charles A Holt John H Kagel John O Ledyard Jack Ochs Alvin E Roth and Shyam Sunder adopt a particular methodological point of view the way to learn how to design and conduct experiments is to consider how good experiments grow organically out of the issues and hypotheses they are designed to investigate

Handbook of Experimental Economics Results Charles R. Plott, Vernon L. Smith, 2008-08-21 Experimental methods in economics respond to circumstances that are not completely dictated by accepted theory or outstanding problems While the field of economics makes sharp distinctions and produces precise theory the work of experimental economics sometimes appear blurred and may produce results that vary from strong support to little or partial support of the relevant theory At a recent conference a question was asked about where experimental methods might be more useful than field methods Although many cannot be answered by experimental methods there are questions that can only be answered by experiments Much of the progress of experimental methods involves the posing of old or new questions in a way that experimental methods can be applied The title of the book reflects the spirit of adventure that experimentalists share and focuses on experiments in general rather than forcing an organization into traditional categories that do not fit The emphasis reflects the fact that the results do not necessarily demonstrate a consistent theme but instead reflect bits and pieces of progress as opportunities to pose questions become recognized This book is a result of an invitation sent from the editors to a broad range of experimenters asking them to write brief notes describing specific experimental results The challenge was to produce pictures and tables that were self contained so the reader could understand quickly the essential nature of the experiments and the results
