NY: McGraw-Hill Education, ISBN 978-0-07-122068-2, 673

Dragan Stojkovic*

Faculty of Economics, University of Kragujevac, Kragujevac, Serbia

In their book titled: *Money, Banking, and Financial Markets*, authors Stephen G. Cecchetti (an economic advisor and the chairman of the Monetary and Economic Department at the Bank for International Settlements), and Kermit L. Schoenholtz (a professor of New York University, the Economic Department of the Leonard N. It is characterized by a large number of examples presented in a contrived way and in detail so that it can be said to be intended for a wide variety of readers, students in particular.

- What is a financial instrument and how is it valued?
- What is a financial market and how does it operate?
- What is a financial institution and why do we need one? and
- What is a central bank and how does it function?

The first part of the book is titled *Money and the Financial System* (pp. 43-110) and consists of the three chapters (Chapters 1, 2 and 3). The first chapter opens with a discussion on the basic elements of the financial system and highlights the fact that the financial system consists of money, financial instruments, financial markets, financial institutions, regulatory agencies and a central bank. Within this chapter, the authors also point out the five important principles of money and banking which run through as the basis from the beginning to the end of the book; these are: time has a value, a risk requires compensation, information is key when making a decision, a market determines prices and the allocation of resources and a stable improvement of welfare. The second chapter analyzes money, both in theory and in practice. In order to understand the essence of the function of money in a national economy, a shorter analysis has been
