The Old Man and the Sea Anthony Smith, 2015-02-26 Octogenarian Anthony Smith s journey was originally inspired by both the Kontiki Expedition of Thor Heyerdahl who he knew and the incredible story of the survivors of a 1940 boat disaster who spent 70 days adrift in the Atlantic eventually reaching land emaciated and close to death While this might sound like a voyage no one would wish to emulate to octogenarian

Anthony Smith it sounded like an adventure and he placed a typically straightforward advertisement in the Telegraph that read Fancy rafting across the Atlantic Famous traveller requires 3 crew Must be OAP Serious adventurers only In his inimitable style Smith details their voyage and the hardships they endured with a matter of fact air that makes his story seem all the more impressive His advanced age allows him a wider perspective not only on the journey but on life itself and his never say die attitude to the difficulty of the journey is inspirational Old men ought to be explorers said T S Eliot and this book certainly gives a compelling argument in his favour It is both a great story a huge storm on the final night of the voyage almost wrecked them on a reef and a call to action for the older generation do not go quietly says Anthony Smith but seek out adventure as long as you are able

The Quest for the True Figure of the Earth

Michael Rand Hoare,2017-09-08 In the 1730s two expeditions set out from Paris on extraordinary journeys the first was destined for the equatorial region of Peru the second headed north towards the Arctic Circle Although the eighteenth century witnessed numerous such adventures these expeditions were different Rather than seeking new lands to conquer or mineral wealth to exploit their primary objectives were scientific to determine the Earth s precise shape by measuring the variation of a degree of latitude at points separated as nearly as possible by a whole quadrant of the globe between Equator and North Pole Although such information had consequences for navigation and cartography the motivation was not simply

utilitarian Rather it was one theme among many in an intellectual revolution in which advances in mathematics paralleled philosophical strife and reputations of the living and the dead stood to be elevated or destroyed In particular the two expeditions hoped to prove the correctness of Isaac Newton's prediction that the Earth is not a perfect sphere but flattened at the poles In this study the Figure of the Earth controversy is for the first time comprehensively explored in all its several dimensions It shows how a largely neglected episode of European science that produced no spectacular process or artefact beyond a relatively minor improvement in maps nevertheless represents an almost unique combination of theoretical prediction and empirical method It also details the suffering of the two teams of scientists in very different extremes of climate whose sacrifices for the sake of knowledge rather than colonial gain caught the imagination of the literary world of the time

Measuring the New World Neil Safier, 2024-05-31 Prior to 1735 South America was terra incognita to many Europeans But that year the Paris Academy of Sciences sent a mission to the Spanish American province of Quito in present day Ecuador to study the curvature of the earth at the Equator Equipped with quadrants and telescopes the mission s participants referred to the transfer of scientific knowledge from Europe to the Andes as a sacred fire passing mysteriously through European astronomical instruments to observers in South America By taking an innovative interdisciplinary look at the traces of this expedition Measuring the New World examines the transatlantic flow of knowledge from West to East Through ephemeral monuments and geographical maps this book explores how the social and cultural worlds of South America contributed to the production of European scientific knowledge during the Enlightenment Neil Safier uses the notebooks of traveling philosophers as well as specimens from the expedition to place this particular scientific endeavor in the larger context of early modern print culture and the emerging intellectual category of scientist as author
