Magic Science:

Magic Science Religion Ira Livingston, 2018-01-09 Magic Science Religion explores surprising intersections among the three meaning making and world making practices named in the title Through colorful examples the book reveals circuitous ways that social cultural and natural systems connect enabling real kinds of magic to operate Among the many case studies are accounts of how an eighteenth century actor gave his audience goosebumps how painters poets and pool sharks use nonlinearity in working their magics how the first vertebrates gained consciousness how plants fine tuned human color vision and the necessarily magical element of activism that builds on the conviction that another future is possible while working to push self fulfilling prophecy into political action *The Science Behind Magic Science Projects* Robert Gardner, 2013-01-01 The experiments in this book touch upon different concepts of scientific principles The concepts in this book include magic through chemistry magic through light and through sticky water as well as magic through motion Magic, Science and Society Alex Dennis, 2024-06-14 Magic Science and Society investigates the way the rationality debate has developed over the last century from E E Evans Pritchard s study of Azande magic through Peter Winch s argument that there can be no such thing as a social science across the arguments about the proper status of science in the 1970s and 1980s to the epistemological and ontological turns of the early twenty first century Different people have different understandings of what is rational some practise magic some orientate to legal convention and tradition and others defer to science and logic Starting with anthropological studies of witchcraft and working through to contemporary debates about epistemology and ontology in social science this book systematically examines the ways key questions about these issues have been framed and answered These include Can magic be real either for members of the cultures that practise it or more generally How can we arbitrate between different types of rationality Is science a benchmark for studying other forms of rationality or just a cultural practice like any other What are the implications of these issues for the social sciences themselves This book will be of interest to anthropologists sociologists philosophers of the social sciences and science studies practitioners **Magic, Science and Religion and the Scope of Rationality** Stanley J. Tambiah, 1990-03-22 This accessible and illuminating book explores the classical opposition between magic science and religion Magic, Science and Religion and Other Essays Bronislaw Malinowski, 2014-04-10 This vintage book comprises three famous Malinowski essays on the subject of religion Malinowski is one of the most important and influential anthropologists of all time He is particularly renowned for his ability to combine the reality of human experience with the cold calculations of science An important collection of three of his most famous essays Magic Science and Religion provides its reader with a series of concepts concerning religion magic science rite and myth This is undertaken in an attempt to form a definite impression and understanding of the Trobrianders of New Guinea The chapters of this book include Magic Science and Religion Primitive Man and his Religion Rational Mastery by Man of his Surroundings Faith and Cult The Creative Acts of Religion Providence in Primitive Life Man s Selective Interest in

Nature etcetera This book is being republished now in an affordable modern edition complete with a specially commissioned new biography of the author **Magic, Science, and Empire in Postcolonial Literature** Kathleen Renk,2012-03-29 This book examines the ways in which contemporary British and British postcolonial writers in the after empire era draw connections between magic defined here as Renaissance Hermetic philosophy and science Writers such as Tom Stoppard Zadie Smith and Margaret Atwood critique both imperial science or science used in service to empire and what Renk calls imperical science a distortion of rational science which denies that reality is holistic and claims that nature can and should be conquered In warning of the dangers of imperical science these writers restore the connection between magic and science as they examine major shifts in scientific thinking across the centuries They reflect on the Copernican Revolution and the historic split between magic and science scrutinize Darwinism consider the relationship between Victorian science and pseudo science analyze twentieth century Uncertainty theories reject bio genetic engineering call for a new approach to science that reconnects science and art and ultimately endeavor to bring an end to the imperial age Overall these writers forge a new discourse that merges science with the arts and emphasizes a holistic philosophy a view shared by both Hermetic philosophy and recent scientific theories such as chaos or complexity theory Along with recent books that focus on the relationship between contemporary literature and science this work focuses on contemporary British literature s critique of science and the ways in which postcolonial literature addresses the relationship between magic science and empire

medicine and science are histories of political and social change as well as accounts of the transformation of particular disciplines over time This volume considers the effect that demands for social and political reform have had on the theory

and above all the practice of medicine and science and on the promotion of human health from the Renaissance and Enlightenment up to the present

Naked Science Laura Nader, 2014-01-02 Naked Science is about contested domains and includes different science cultures physics molecular biology primatology immunology ecology medical environmental mathematical and navigational domains While the volume rests on the assumption that science is not autonomous the book is distinguished by its global perspective Examining knowledge systems within a planetary frame forces thinking about boundaries that silence or affect knowledge building Consideration of ethnoscience and technoscience research within a common framework is overdue for raising questions about deeply held beliefs and assumptions we all carry about scientific knowledge We need a perspective on how to regard different science traditions because public controversies should not be about a glorified science or a despicable science

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa

Social Science Quotations Robert Merton, 2018-04-27 Social Science Quotations has been prepared to meet an evident unmet need in the literature of the social sciences Writings on the lives and theories of individual social scientists abound but there has been no fully documented collection of memorable quotations from the social sciences as a whole The frequent use of quotations in scientific as well as literary writings that are mere summaries or paraphrases typically fail to capture the full force of formulations that have made quotations memorable This book of quotations invites the further reading or rereading of the original texts beyond the quotations themselves Sills and Merton draw extensively upon the writings that constitute the historical core of the social sciences and social thought those works with staying power often described as the classical texts Many quotations have been drawn from these classical texts because the quotations

contain memorable ideas memorably expressed Both consequential and memorable these words have been quoted over the generations entering into the collective memory of social scientists everywhere and at times diffusing into popular thought and into the vernacular as well This book is useful to social scientists anthropologists economists historians political scientists psychiatrists psychologists sociologists and statisticians and for all who want to learn or verify memorable formulations and phrases concerning social thought and social theories It is particularly useful for graduate students taking courses that examine the history of their discipline The Journal of Mental Science ,1926 **The Mysteries of Magic** Éliphas Lévi,Arthur Edward Waite,1886 **The Christian Century** ,1923 Science John Michels (Journalist),1913 Vols for 1911 13 contain the Proceedings of the Helminothological Society of Washington ISSN 0018 0120 1st 15th meeting **Science and Invention** ,1926 **Magic Science** Jim Wiese,1998-03-01 Provides instructions for science projects and experiments that can be performed as magic tricks and which require materials readily found in the house or neighborhood
