Abstract

A case-control study was conducted to test the hypothesis that exposure to magnetic fields of the type generated by high-voltage power lines increases cancer incidence in children. The study base consisted of everyone under age 16 years who had lived on a property located within 300 meters of any of the 220 and 400 kV power lines in Sweden during the period 1960–1985. Subjects were followed from their entry into the study base through 1985. A total of 142 cancer cases were identified through a record linkage to the Swedish Cancer Registry. There were 39 leukemia and 33 central nervous system tumor cases. A total of 558 controls were selected at random from the study base. Exposure was

Magnetic Fields and Cancer in People Residing Near Swedish High Voltage Power Lines Maria Feychting, Anders Ahlbom, 1994-05-01 A study aimed at testing the hypothesis that exposure to magnetic fields of the type generated by high voltage power lines increases cancer incidence This case control study was based on the population comprised of everyone who lived on property located within 300 meters from any of the 220 and 400 kv power lines in Sweden during the period from 1960 through 1985 90 charts and tables **Assessment of Health Effects from Exposure to Power-line**

Frequency Electric and Magnetic Fields, 1998 Handbook of Biological Effects of Electromagnetic Fields, Third Edition - 2 Volume Set Charles Polk, Elliot Postow, 1995-12-21 The first edition of this book has been recognized as the standard reference on biological effects of electric and magnetic fields from DC to microwaves But much has changed in this science since the book's original publication in 1986 With contributions from eighteen leading researchers this latest edition includes authoritative discussions of many new developments and will quickly become the new must have resource handbook Dielectric properties of biological tissue are thoroughly examined followed by chapters on physical mechanisms and biological effects of static and extremely low frequency magnetic fields New chapters on topics that were treated very briefly in the first edition now receive extensive treatment These topics include electric and magnetic fields for bone and soft tissue repair electroporation and epidemiology of ELF health effects The chapter on computer methods for predicting field intensity has been substantially revised to describe new numerical techniques developed within the last few years and includes calculations of power absorbed in the human head from cellular telephones The chapter discussing experimental results on RF interaction with living matter now contains information on effects of very high power very short duration pulses A new appendix on safety standards is based on the latest publications of governmental as well as quasi governmental organizations such as the U S Council on Radiation Protection in the United States Europe and Australia With all its revisions this updated version of the CRC Handbook of Biological Effects of Electromagnetic Fields provides the most comprehensive overview available of this rapidly changing science **Electric and magnetic fields: invisible risks?** Sagan, 1996-05-01 The book

determines that risks of EMF exposure are small compared to the already existing incidence of cancer in the population Five international studies completed since 1992 are excerpted and summarized The consensus of these reviews appears to be a general skepticism regarding the relationship of EMFs to human health effects particularly cancer or This treatise on electromagnetic fields EMF attempts to unravel the complex problem of how these fields affect humans and animals a challenge which has recently come under intense public scrutiny This book provides the reader with the knowledge to make an informed rational decision about the possible dangers inherent in our everyday contact with electric power **Biological Effects of Electric and Magnetic Fields** David O. Carpenter, Sinerik Ayrapetyan, 2012-12-02 Recent concerns over the possible hazards of electrical and magnetic fields in the home and workplace are comprehensively addressed within this book

The chapters contain detailed research on the biological effects of electric and magnetic fields and evidence for and against any interaction of electromagnetic fields EMFs and biological systems The relative risk of exposure to EMFs Putative behavioral and neural effects of EMFs EMF effects on cells

Non-ionizing Radiation IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 2002 This volume evaluates possible carcinogenic hazards from exposures to static and extremely low frequency ELF electric and magnetic fields It is the first of two IARC Monographs volumes on various kinds of non ionizing radiation Extremely low frequency ELF magnetic field exposures result from proximity to electric power transmission lines household wiring and electric appliances and are in addition to the exposure that results from the earth's magnetic field Overall extremely low frequency magnetic fields were evaluated as possibly carcinogenic to humans Group 2B Static magnetic fields and static and extremely low frequency electric fields could not be classified as to carcinogenicity to humans Group 3

Power Frequency Magnetic Fields and Public Health William F. Horton, Saul Goldberg, 1995-06-27 The prospect that electromagnetic fields EMFs may foster disease is an alarming thought one which raises such questions as What are these invisible forces How are they produced Is there conclusive evidence that they are harmful to the human body How do we protect ourselves against possible harm from them This book addresses these and other questions about magnetic fields bringing together in a single reference source the scientific background current status of health research and means to reduce the impact of EMFs in our environment Important information is provided for developing policies and procedures related to human interaction with magnetic fields The authors describe the concept of prudent avoidance emphasizing its value as a tool in the design construction and valuation of homes offices retail facilities and factories The book provides theory computer simulation results measured data and recommendations for magnetic field management all of which are useful as a power system design and construction resource The authors have compiled an impressive summary of the studies findings and reports done in the past 15 years in the areas of human health effects which might be attributed to exposure to power frequency magnetic fields Wherever appropriate throughout text the authors provide examples to illustrate concepts and include end of chapter exercises with solutions to help readers solidify their understanding of the material presented Originally designed as a textbook this is also

an excellent reference in the areas of environmental engineering city and regional planning and electrical engineering
