The Other Canon of Economics, Volume 1 Erik Reinert,2024-02-13 Other Canon Economics Essays in the Theory and History of Uneven Economic Development brings together key essays on development economics from one of the most prolific and important development economists and historians of economic policy today Erik S Reinert argues through essays ranging from 1994 to 2020 that neo classical economics damages developing countries the theory of comparative advantage leaves out a number of factors which make economic activities qualitatively different as carriers of economic growth Based on a long intellectual tradition started by the Italian economists Giovanni Botero 1589 and Antonio Serra 1613 and later used in virtually all presently industrialised countries Reinert shows that the country which exports increasing returns goods e g high end manufacture has advantages

over the country which exports diminishing returns goods e.g. commodities. This has important implications for today's development strategies that Reinert argues should be seen as industrial strategies.

Problems, Methods and Tools in Experimental and Behavioral Economics Kesra Nermend, Małgorzata Łatuszyńska, 2018-09-18. These proceedings highlight research on the latest trends and methods in experimental and behavioral economics. Featuring contributions presented at the 2017 Computational Methods in Experimental Economics CMEE conference which was held in Lublin, Poland, it merges findings from various domains to present deep insights into topics such as game theory, decision theory, cognitive neuroscience, and artificial intelligence. The fields of experimental economics and behavioral economics are rapidly evolving. Modern applications of experimental economics require the integration of know-how from disciplines including economics, computer science, psychology, and neuroscience. The use of computer technology enhances researchers' ability to generate and analyze large amounts of data, allowing them to use non-standard methods of data logging for experiments such as cognitive neuronal methods. Experiments are currently being conducted with software that, on the one hand, provides interaction with the people involved in experiments and, on the other, helps to accurately record their responses. The goal of the CMEE conference and the papers presented here is to provide the scientific community with essential research on and applications of computer methods in experimental economics. Combining theories, methods, and regional case studies, the book offers a valuable resource for all researchers, scholars, and policymakers in the areas of experimental and behavioral economics.

The Poverty of Economics Manuel Sanchis i Marco, 2024-09-19 This book improves the alignment of economics with the idea of justice the first virtue of any social institution according to Rawls To this aim it provides the analytical framework necessary to ensure a just economy While today s notion of economics favours the economics of extortion this book proposes a model that transcends Lionel Robbins canonical relationship between ends and means as it proposes a broader notion of rationality incorporating the range of human attributes In contrast to Robbins economic rationality economic choices must be based on adequate and good reasons as Rescher claims because both the means and the ends require rational deliberation As a result the book challenges Robbins hope of turning general concepts like scarcity costs etc into universal economic principles guiding human behavior in a vacuum It disputes the idea that through the application of the abstract formulation of economic statements unconnected to reality economics can be rationalized in a morally neutral space based on empty rationality By contrasting the three rival versions of economics formalism axiomatic empiricism technocratic consequential and institutionalism axio ideological the book shows that it is not possible to switch between them as they refer to segmented mental universes of abstraction
