Niels Bohr The Man His Science World:

Niels Bohr: the Man, His Science, & the World They Changed Ruth E. Moore, 1966 A biography of the man whose scientific work and influence did the most to bring the age of the atom into being a man of profound humanity who almost altered the course of history during World War II Dust jacket *British Scientists and the Manhattan Project* Ferenc Morton Szasz, 1992-06-18 During World War II Franklin D Roosevelt and Winston Churchill pooled their nations resources in the race to beat the Germans to the secret of the atomic bomb This book tells the story of the British scientists who journeyed to Los Alamos to help develop the world s first nuclear weapons *Reader's Guide to the History of Science* Arne Hessenbruch, 2013-12-16 The Reader s Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn *The Quantum Ten* Sheilla Jones, 2014-03-31 Theoretical physics is in trouble At least that s the impression you d get from reading a spate of recent books on the continued failure to resolve the 80 year old problem of unifying the classical and quantum worlds The seeds of this problem were sewn eighty years ago when a dramatic revolution in physics reached a climax at the 1927 Solvay conference in Brussels It s the story of a rush to formalize quantum physics the work of just a handful of men fired by ambition philosophical conflicts and personal agendas Sheilla Jones paints an intimate portrait of the ten key figures who wrestled with the mysteries of the new science of the quantum along with a powerful supporting cast of famous and not so famous colleagues The Brussels conference was the first time so many of the quantum ten had been in the same place Albert Einstein the lone wolf Niels Bohr the obsessive but gentlemanly father figure Max Born the anxious hypochondriac Werner Heisenberg the intensely ambitious one Wolfgang Pauli the sharp tongued critic with a dark side Paul Dirac the silent Englishman Erwin Schrödinger the enthusiastic womanizer Prince Louis de Broglie the French aristocrat Pascual Jordan the ardent Aryan nationalist who was not invited and Paul Ehrenfest who was witness to it all This is the story of quantum physics that has never been told an equation free investigation into the turbulent development of the new science and its very fallible creators including little known details of the personal relationship between the deeply troubled Ehrenfest and his dear friend Albert Einstein Jones weaves together the personal and the scientific in a heartwarming and heartbreaking story of the men who struggled to create quantum physics a story of passion tragedy ambition and science **With All Deliberate Speed** Norman I. It's Not About the Shark David Niven, 2014-11-04

In the spirit of The Tipping Point and Freakonomics David Niven presents a new way of decoding the riddles of the everyday choices we make It's Not About the Shark opens the door to the groundbreaking science of solutions by turning problems and how we solve them upside down When we have a problem most of us zero in take it apart and focus until we have it solved David Niven shows us that focusing on the problem is exactly the wrong way to find an answer Putting problems at the center of our thoughts shuts down our creative abilities depletes stamina and feeds insecurities It's Not About the Shark shows us how to transform our daily lives our work lives and our family lives with a simple but rock solid principle If you start by thinking about your problems you'll never make it to a solution If you start by thinking about a solution you'll never worry about your problems again Through real life examples and psychology research Niven shows us why Focusing on the problem first makes us 17 times less likely to find an answer Being afraid of a problem is natural we're biologically primed to be afraid Finding a problem creates power which keeps you from finding a solution Working harder actually hides answers Absolute confidence makes you less likely to find the answer Looking away from a problem helps to see a solution Listening only to yourself is one of the best ways to find an answer Combining hard facts good sense and a strong dose of encouragement

Niven provides fresh and positive ways to think about problem solving

Worlds Within Worlds: Nuclear fission Isaac Asimov, 1972 *The Oxford Companion to American Military History*, **The Non-local Universe** Robert Nadeau, Minas C. Kafatos, 2001

Classical physics states that physical reality is local a point in space cannot influence another point beyond a relatively short distance However In 1997 experiments were conducted in which light particles photons originated under certain conditions and traveled in opposite directions to detectors located about seven miles apart The amazing results indicated that the photons interacted or communicated with one another instantly or in no time Since a distance of seven miles is quite vast in quantum physics this led physicists to an extraordinary conclusion even if experiments could somehow be conducted in which the distance between the detectors was half way across the known universe the results would indicate that interaction or communication between the photons would be instantaneous What was revealed in these little known experiments in 1997 is that physical reality is non local a discovery that Robert Nadeau and Menas Kafatos view as the most momentous in the history of science In *The Non Local Universe* Nadeau and Kafatos offer a revolutionary look at the breathtaking implications of non locality They argue that since every particle in the universe has been entangled with other particles like the two photons in the 1997 experiments physical reality on the most basic level is an undivided wholeness In addition to demonstrating that physical processes are vastly interdependent and interactive they also show that more complex systems in both physics and biology display emergent properties and or behaviors that cannot be explained in the terms of the sum of parts One of the most startling implications of non locality in human terms claim the authors is that there is no longer any basis for believing in the stark division between mind and world that has preoccupied much of western thought since the seventeenth century And they also make a convincing case that human consciousness can now be viewed as emergent from and seamlessly connected with the entire cosmos In pursuing this groundbreaking argument the authors not only provide a fascinating history of developments that led to the discovery of non locality and the sometimes heated debate between the great scientists responsible for these discoveries They also argue that advances in scientific knowledge have further eroded the boundaries between physics and biology and that recent studies on the evolution of the human brain suggest that the logical foundations of mathematics and ordinary language are much more similar than we previously imagined What this new knowledge reveals the authors conclude is that the connection between mind and nature is far more intimate than we previously dared to imagine What they offer is a revolutionary look at the implications of non locality implications that reach deep into that most intimate aspect of humanity consciousness
