Bendahmane, David William McClintock, 1985 Conscious in a Vegetative State? A Critique of the PVS Concept Peter McCullagh, 2006-01-17 Having been originally introduced as a term to facilitate discussion of a specific group of patients regarded as entering a state of unawareness following coma the Persistent Vegetative State PVS has established itself as an apparently discrete medical condition with clear cut implications for ethicists and lawyers that exceed any scientifically based understanding As a consequence of this upgrading conclusions drawn about the status and hence the management of this uncommon condition have been increasingly extended to other patients with much more common forms of disability This book traces the origins of prevailing perceptions about PVS and submits these to critical examination In

doing this it comes to the conclusion that inadequate attention has been paid to acknowledging what is not known about affected individuals and that assumptions have consistently come to be traded as facts Re examination of the basis of the PVS and the adoption of a more scientific approach is long overdue and is owed to the community at large which has generally been provided by many medical practitioners with a dumbed down account of the condition The book will be of interest to philosophers medical graduates and neuroscientists but is also intended to remain accessible to the general reader with an interest in the wider implications of trends in medical thinking for attitudes towards many classes of patient It has an extensive bibliography and will be of specific interest to bioethicists and lawyers with professional interests in PVS

Health Informatics Meets EHealth G. Schreier,D. Hayn,2018-05-18 Biomedical engineering and health informatics are closely related to each other and it is often difficult to tell where one ends and the other begins but ICT systems in healthcare and biomedical systems and devices are already becoming increasingly interconnected and share the common entity of data This is something which is set to become even more prevalent in future and will complete the chain and flow of information from the sensor via processing to the actuator which may be anyone or anything from a human healthcare professional to a robot Methods for automating the processing of information such as signal processing machine learning predictive analytics and decision support are increasingly important for providing actionable information and supporting personalized and preventive healthcare protocols in both biomedical and digital healthcare systems and applications This book of proceedings presents 50 papers from the 12th eHealth conference eHealth2018 held in Vienna Austria in May 2018 The theme of this year s conference is Biomedical Meets eHealth From Sensors to Decisions and the papers included here cover a wide range of topics from the field of eHealth The book will be of interest to all those working to design and implement healthcare today
