Nutrition Food The Environment:

Nutrition, Food, and the Environment Vincent Hegarty, 1995 Introduces nutrition by linking information on nutrients to an understanding of how food production and processing and the impact of these on environmental quality influence each person's nutritional status Discusses how nutrients work in the body why some foods are high or low in individual nutrients how the body is harmed by deficiencies or excesses of nutrients and why nutrient requirements change as we get older

Environmental Nutrition Joan Sabate, 2019-07-02 Environmental Nutrition Connecting Health and Nutrition with Environmentally Sustainable Diets explores the connection between diet environmental sustainability and human health Current food systems are a major contributor to our most pressing health and environmental issues including climate change water scarcity food insecurity and chronic diseases This book not only seeks to increase our understanding of the interrelatedness of these major global issues but also aids in the creation of new solutions Sections discuss the diet the health and environment trilemma food systems and their trends environmental nutrition as an all encompassing discipline and the environmental nutrition model

Latin America and the Caribbean Regional Overview of Food Security and Nutrition 2024 Food and Agriculture Organization of the United Nations, IFAD, PAHO, UNICEF, WFP, 2025-01-27 Latin America and the Caribbean have seen a decline in hunger and food insecurity for two years driven by social protection programs and post COVID recovery However disparities persist especially among women rural populations and vulnerable groups The region is unlikely to meet most nutrition targets and healthy diets remain expensive Climate variability is increasing in the region affecting food security across availability access utilization and stability This climate impact reduces agricultural productivity disrupts food supply chains and raises food prices Vulnerable populations are most affected with changing diets further exacerbating the situation Climate change is worsening food security and the causes of malnutrition

Integration of environment and nutrition in life cycle assessment of food items: Opportunities and challenges McLaren, S., Berardy, A., Henderson, A., Holden, N., Huppertz, T., Jolliet, O., De Camillis, C., Renouf, M., Rugani, B, 2021-12-23 This report is the outcome of a consensus building project to agree on best practices for environmental and nutritional Life Cycle Assessment nLCA methodology and identify future research needs The project involved 30 nutritional and environmental LCA researchers from 18 countries It focused on the assessment of food items as opposed to meals or diets Best practice recommendations were developed to address the intended purpose of an LCA study and related modeling approach choice of an appropriate functional unit assessment of nutritional value and reporting nLCA results An nLCA study should report the quantities of as many essential nutrients as possible and aim to provide information on the nutritional quality and or health impacts in addition to nutrient quantities Outstanding issues requiring further research attention include defining a minimum number of nutrients to be considered in an nLCA study treatment of nutrients to limit use of nutrient indexes further development of Impact Assessment methods representation of nutritional changes that may occur during subsequent

distribution and food preparation in cradle to gate nLCA studies and communication of data uncertainty and variability More data are required for different regions particularly developing countries for the processing distribution retail and consumption life cycle stages and for food loss and waste Finally there is a need to extend nLCA methodology for the assessment of meals and diets to consider further how to account for the multi functionality of food in a sustainability framework and to set nLCA studies within the context of environmental limits These results provide a robust basis for improving nLCA methodology and applying it to identify solutions that minimize the trade offs between nourishing populations and safeguarding the environment

Regional Overview of Food Security and Nutrition in the Near East and North Africa 2019 Food and Agriculture Organization of the United Nations, World Food Programme, International Fund for Agriculture Development, World Health Organization, United Nations International Children's Emergency Fund, 2020-05-01 The past few decades have seen dramatic improvements in the region in access to food reduction in stunting rates in premature death and disability caused by communicable maternal neonatal and nutritional diseases However the gains in the fight against hunger and malnutrition have reversed in the wake of conflicts and violence that have spread in many parts of the region in the last decade Today nearly 55 million people in the Arab States 13.2 percent of the population are hungry and the situation is particularly worrying in countries affected by conflicts and violence Iraq Libya Somalia Syria Sudan and Yemen Displacements and forced migration are widespread in the region especially among the growing youth population segment

Many countries carry a double burden of malnutrition including overweight and obesity and undernutrition. A high or very high prevalence of stunting in children under the age of five persists in nearly half of the Arab States while anaemia is a severe public health issue in certain countries. The trends of overweight and obesity continue to worsen for children and adults. Beyond these numbers, the report explores food systems in the Arab States and the policies that support them. It also explores how the latter have contributed to poor nutritional outcomes by failing to make safe and diversified healthy diets available to all. While there has been significant progress in policies designed to reduce caloric deficiencies in the population, the policy reaction to address existing malnutrition problems, particularly in relation to overweight and obesity.

The African Food Environments Amos Laar, Kaleab Baye, Anna Larrey, Francis Zotor, Gershim Asiki, 2023-09-05. In many respects, the continent of Africa is in transition. Prominent among them currently is the nutrition transition. One consequence of the nutrition transition is the increase in prevalence of nutrition-related non-communicable diseases (NCDs) such as obesity, type 2 diabetes, cardiovascular diseases, and certain cancers. Although NCDs are a global public health problem, the rate of increase in NCDs morbidity and mortality in some African countries is staggering. This surge has been linked to modifiable environmental factors: factors that facilitate the consumption of obesogenic, energy-dense, nutrient-poor foods rather than unrefined cereals, fruits, and vegetables. It has long been recognized that the physical and social environments in which people live, work, and eat are critical determinants of their health. More recently, there has been a greater focus on the food environment as a key determinant of health. Available evidence shows that unhealthy food environments drive unhealthy diets, and an unhealthy diet is one of four main risk factors for NCDs.

Food environment research in Sri Lanka: A desk review Clarke, Rebecca Namara, Sehgal, Mrignyani, Marshall, Quinn, Kumar, Neha, 2025-04-23. Research has documented the availability of modern food retail, e.g. fast food, in both urban and rural contexts and its influence, especially on adolescents. Barriers to accessing healthy diets include the high cost of nutritious foods, especially vegetables and animal source foods, the time needed to cook fresh meals, and food safety. Most research to date has utilized cross-sectional designs with relatively few studies examining associations with diet or health outcomes or evaluating interventions.

Healthier food and healthier food environments at sports events World Health Organization, 2023-08-23. Healthy, safe, and sustainable diets are important for both human and planetary health, and sports events ought to be an ideal setting to model and promote healthy eating as part of a healthy lifestyle. Yet even with the best of intentions, foods and beverages high in fats, sugars, or salt are typically abundant in and around stadiums during large and small sports events, often consumed in excess by fans on match days, and are also frequently associated with sports-related marketing and sponsorships. The foods and beverages consumed at sports events contribute little to an individual's overall diet, but the total number of meals, snacks, and beverages sold can be substantial. Providing a variety of healthy, delicious, and easy-to-consume food while providing fewer options and smaller portions of unhealthy options within these environments can contribute to

health wellness and the prevention of diet related noncommunicable disease Likewise the high visibility of sports mega events in particular offers valuable opportunities for potentially larger impact reaching billions of fans worldwide creating positive perceptions of healthier foods and beverages at the stadia and beyond This document intended for use by sports events organizers proposes five actions to achieve healthier food and healthier food environments and suggests related activities that can happen during the planning operational and post event phases of sports events It may also be used by governments local authorities and sports stadium managers to create a healthy public food procurement and service policy for sport settings more generally

Routledge Handbook of Sustainable Diets Kathleen Kevany, Paolo Prosperi, 2022-12-30 This handbook presents a must read comprehensive and state of the art overview of sustainable diets an issue critical to the environment and the health and well being of society Sustainable diets seek to minimise and mitigate the significant negative impact food production has on the environment Simultaneously they aim to address worrying health trends in food consumption through the promotion of healthy diets that reduce premature disability disease and death Within the Routledge Handbook of Sustainable Diets creative compassionate critical and collaborative solutions are called for across nations across disciplines and sectors In order to address these wide ranging issues the volume is split into sections dealing with environmental strategies health and well being education and public engagement social policies and food environments transformations and food movements economics and trade design and measurement mechanisms and food sovereignty Comprising of contributions from up and coming and established academics the handbook provides a global multi disciplinary assessment of sustainable diets drawing on case studies from regions across the world The handbook concludes with a call to action which provides readers with a comprehensive map of strategies that could dramatically increase sustainability and help to reverse global warming diet related non communicable diseases and oppression and racism This decisive collection is essential reading for students researchers practitioners and policymakers concerned with promoting sustainable diets and thus establishing a sustainable food system to ensure access to healthy and nutritious food for all

Transforming Food Environments Charlotte EL Evans, 2022-03-21 We regularly find ourselves in food environments that promote the consumption of high fat and sugary foods rather than encouraging us to eat more fruit and vegetables However because of increased media attention people are becoming more interested in alternative approaches to improving the many food related decisions we make daily Transforming Food Environments features evidence from several disciplines exploring initiatives that have improved food environments and discusses the importance of achieving success in equitable and sustainable ways The book presents information on diverse food environments followed by methods that help readers become aware of the design of interventions and food policies It covers food environments in schools workplaces and community centres as well as fast food establishments and food marketing The book presents methods to help encourage better food choices and purchase of healthier foods It explores persuasion tactics used by health professionals such as changing availability and or price using nudging techniques and food labelling Led by Editor Charlotte Evans Associate Professor of Nutritional Epidemiology and Public Health Nutrition at the University of Leeds and written by an international range of authors from countries including the US Canada Australia New Zealand Japan and the United Kingdom this multidisciplinary book appeals to students researchers public health professionals and policy makers It also raises awareness and provides a comprehensive treatment of the importance of our environments on food choice **Nutrition among Vulnerable**

Populations Heather Eicher-Miller, Marie Kainoa Fialkowski Revilla, 2020-11-27 Food insecurity and low resources continue to be a burden influencing the health well being growth and development of millions of U S children and adults Groups and individuals experiencing restrained access to food are our neighbors individuals we may see each day and individuals who we may not interact with or see because of their isolated situations They include the elderly those experiencing mental illness veterans certain race ethnic groups adolescents young women with children those living in rural areas and those using food pantries among others Many of these groups both hidden and visible have rates of food insecurity above the national average that are resistant to national improvements in food security Yet attention to these subsets of the population is imperative to improve U S health and nutrition and to reduce rates of chronic disease Many groups face specific barriers to maintaining sufficient food for example rural populations may find it difficult to access federal food assistance or other resources such as food pantries and nutrition education because of distance or lack of consistent internet access separating them from these resources Further their remote locations may make it difficult to obtain the types of foods that they prefer Other specific barriers may include limited facilities and equipment for food preparation access to culturally appropriate foods and preparation supplies and foods that complement the foods that they already have Tailored approaches to quantify access to

food the nutrition environment dietary intake and other barriers are necessary to build successful interventions and to quantify the needs of these populations

Local, Traditional and Indigenous Food Systems in the 21st Century to Combat Obesity, Undernutrition and Climate Change, 2nd edition Rebecca Kanter, Sofia Boza, Gina Kennedy, 2023-07-31 Traditional and indigenous food systems have existed for centuries and were in balance with local food supplies globally However between the mid 20th and early 21st century the green revolution dramatically altered food production which in turn affected the inclusivity of traditional production systems within food systems and subsequently traditional dietary intakes This change was accompanied by lifestyle changes and spurred a global nutrition transition Today the world faces a global syndemic of obesity undernutrition and climate change A new call to action to create food systems that nourish people and sustain the planet is needed Traditional and indigenous food systems have long been recognized as systems that can both support good human nutrition as well as maintain a balance with nature There is an underutilized knowledge base around traditional and indigenous food systems This includes the knowledge of nutritious species traditional culinary preparations and cultural practices Greater agricultural production of underutilized species can result in more sustainable agricultural and food systems which can also help improve livelihoods and food security Traditional and indigenous cultural practices with respect to both land and water management as well as culinary practices contribute to both sustainable food production and consumption These practices require a greater evidence base in order to be incorporated into public health nutrition initiatives related to improving dietary quality such as food based dietary guidelines for example An increased focus on the importance of local traditional and indigenous food systems and nutrition could therefore help countries to improve human nutrition and ideally help mitigate the global syndemic of obesity undernutrition and climate change This Research Topic will focus on documenting diverse local food systems and promoting elements within them that can help improve nutrition and health both human and planetary in various ways including the livelihood development of knowledge holders

Population Health Intervention Research Daniel W. Harrington, Sara McLafferty, Susan J. Elliott, 2016-07-22 Health geographers are well situated for undertaking population health intervention research PHIR and have an opportunity to be at the forefront of this emerging area of inquiry However in order to advance PHIR the scientific community needs to be innovative with its methodologies theories and ability to think critically about population health issues For example using alternatives e g community based participatory research to traditional study designs such as the randomised control trial health geographers can contribute in important ways to understanding the complex relationships between population health both intended and unintended consequences interventions and place Representing a diverse array of health concerns ranging across chronic and infectious diseases and research employing varied qualitative and quantitative methodologies the contributions to this book illustrate how geographic concepts and approaches have informed the design and planning of intervention s and or the evaluation of health impacts For example the authors argue that geographically

targeting interventions to places of high need and tailoring interventions to local place contexts are critically important for intervention success Including an afterword by Professor Louise Potvin this book will appeal to researchers interested in population and public community health and epidemiology as well as health geography

Transitioning to nutrition-sensitive food environments in Ghana: Triple sector strategies to reduce the triple burden of malnutrition Mockshell, Jonathan,Asante-Addo, Collins,Andam, Kwaw S.,Asante, Felix A.,2021-08-13

The triple burden of malnutrition is growing in low and middle income countries LMICs Increasing access to affordable ultra processed foods in the food environment is contributing to this problem While existing explanations for this triple burden of malnutrition have examined demand side factors of food choices the supply side policies relating to the food environment drivers ideas and actors interests have been neglected Using a case study of Ghana this analysis combines the Advocacy Coalition Framework with the narrative policy analysis to unpack the supply side food environment policies and actors driving the triple burden of malnutrition Applying a mixed methods analysis of the transcripts the narratives reveal public private and civil society organization CSO coalitions with different ideas and interests in the food environment In the private sector coalition food companies engage in aggressive advertising and are driven by profit motives leading to the supply of more ultra processed foods The public sector is failing to regulate the market because of inadequate policies limited institutional capacities and coordination enforcement challenges inadequate resources and self interest Social activism by CSOs for example pressuring food companies to deliver healthy foods and holding the government accountable is also lacking The result is a triple sector public private and CSO failure in the urban food environment with consequences on the availability of ultra processed foods This has long lasting implications for the reduction of the triple burden of malnutrition and the achievement of zero hunger To accelerate nutrition sensitive food environments that deliver healthier food options we argue that it is critical to entertain the ideas and interests of stakeholders and implement food environment policies that cover private and public sector initiatives as well as increase consumer awareness

Food Systems Evaluation Methods and Sustainability

Assessment Bradley George Ridoutt,Aida Turrini,2024-03-08 The food system is responsible for some of society s most pressing sustainability challenges Diets are currently unsustainable in many countries as evidenced by the growing burden of malnutrition degradation of natural resources contributions to climate change and unaffordability of healthy diets There is an urgent need to address the gaps in understanding of what a sustainable food system means across varying populations and geographies and how we can better measure these systems while identifying how dietary choices impact on human health and the environment However decision makers and experts are questioning whether it is possible to meet environmental social and economic goals simultaneously or whether trade offs are necessary Thus the development of better measurements and indicators to clearly understand the benefits and considerations for healthy and sustainable food systems is needed
