Updates on Clinical and Molecular Epidemiology of Tuberculosis Weimin Li, Haican Liu, Yang Yang, Hui Jiang, 2024-03-08 Addressing the tuberculosis TB epidemic is crucial to reduce morbidity mortality and health care burden Cases of confirmed drug resistant TB have almost doubled over the past decade Drug resistance represents one of leading causes of death among TB patients and is responsible for approximately one third of TB related deaths worldwide which is associated with TB recurrence and transmission In recent years the emerging molecular epidemiology methods have attributed to better TB management For example in many settings studies using molecular epidemiology methods have demonstrated the recent transmission of Mycobacterium tuberculosis M TB strains However the transmission patterns of drug resistant TB in most low and middle income developing countries remain unclear Traditional transmission models based on clinical and epidemiological parameters were not sufficient to identify potential risk factors By using molecular epidemiology analysis further insights can be gained into the association between M TB isolates and epidemic populations This makes molecular epidemiology studies effective measures to establish phylogenetic relationships with clinical patients identify clusters and track TB transmission Studies investigating clinical and molecular epidemiology will provide theoretical basis and scientific strategy for TB prevention and control We hope to address the TB associated health care burden and the current insufficient or imprecise control strategies for TB management More importantly we would like to discuss more efficient approaches in this field with the development of molecular epidemiology method and share insights to reduce TB burden

Manual of Definitive Surgical Trauma Care Kenneth D Boffard, Jonathan White, 2024-06-07. Developed for the International Association for Trauma Surgery and Intensive Care (IATSI), the *Manual of Definitive Surgical Trauma Care* 6e is ideal for training all surgeons and anaesthetists who manage trauma on an infrequent basis. The Manual is updated every 4 years and reflects the most recent developments in patient management based on new evidence-based information. Its focus is on the importance of the multidisciplinary care of the trauma surgical patient. This sixth edition has evolved and the all important section on the Non Technical Skills which are required has been expanded. A significant number of the original guidelines in trauma have been archived as they are no longer pertinent or have been superseded. The increasing and occasionally harmful role of non operative management (NOM) has been recognized. The Military Environments and Austere Environments chapters have been substantially revised to reflect current multinational combat experience and broadened to reflect modern asymmetrical conflicts and the increased need for humanitarian intervention including military peacekeeping in which only one side wears a uniform. Military weapons are used in major cities against the civilian population. More recently urban non military populations have been the targets and victims of heavy military combat including use of ultra sophisticated weaponry. Each situation carries its own spectrum of injury and responsibility of care. Including website access to a selection of videos which provide an anatomic overview of surgical approaches, this resource provides a gold standard educational and training resource to help prepare the relatively fully trained surgeon to manage the difficult injuries that might present to a major trauma centre.

Nutritional Management of Diabetes Mellitus and Dysmetabolic Syndrome John P. Bantle, G. Slama, 2006-01-01. Evaluating treatment and prevention strategies. Over the next decade the global number of people with diabetes and at risk of diabetes and cardiovascular disease is expected to grow by 25% largely driven by the rising prevalence of obesity and inactivity. The problem is especially serious in Asia where the WHO predicts that in less than a decade 60% of the worldwide population with diabetes will be found. In order to avoid that the disease turns into a huge economic burden, individuals at risk must be identified and prevention and suitable treatment interventions implemented.

Conceding that the optimal diet for diabetes has yet to be defined and that nutrition and lifestyle management must be individualized to enhance the potential for a successful outcome this publication examines the impact of lifestyle which includes both nutritional management and physical activity in the prevention and treatment of diabetes Among the topics addressed are the dysmetabolic syndrome glycemic effect of carbohydrates glycemic control and beyond diabetes in the life cycle as well as the role of drugs and dietary therapy Written by leading experts in the field the papers collected in this publication contain a wealth of information for nutritionists dietitians physicians and epidemiologists
