Bradford, 1995 Abstract The nuts and bolts problem is the following Given a collection of  $n$  nuts of distinct sizes and  $n$  bolts of distinct sizes such that for each nut there is exactly one matching bolt find for each nut its corresponding bolt subject to the restriction that we can only compare nuts to bolts That is we can neither compare nuts to nuts nor bolts to bolts This humble restriction on the

comparisons appears to make this problem quite difficult to solve In this paper we illustrate the existence of an algorithm for solving the nuts and bolts problem that makes  $O(n \lg n)$  nut and bolt comparisons We show the existence of this algorithm by showing the existence of certain expander based comparator networks Our algorithm is asymptotically optimal in terms of the number of nut and bolt comparisons it does Another view of this result is that we show the existence of a decision tree with depth  $O(n \lg n)$  that solves this problem **Hearings** United States.
