*Free Clinics* Virginia M. Brennan, 2013-05-15 Free clinics and student run clinics are an essential part of America's health care safety net. In community after community pro bono and student run health clinics have sprung up over the past 30 years providing critically needed care to medically underserved populations. *Free Clinics* is a mosaic formed by accounts of such clinics around the United States. These wide ranging narratives from urban to rural from primary care to behavioral health care provide examples that will assist other communities seeking to find the model that best fits their needs. The Patient Protection and Affordable Care Act has improved access to health care for many Americans but millions remain and will remain uninsured or underinsured. Free clinics provide non-emergency care to those in need. Nationwide professionals can be found offering volunteer services at these clinics. Contributors to this volume typically people with personal familiarity as clinicians or area residents with the clinics they write about cover a variety of topics including a review of the literature, data driven accounts of clinic usage and ethical guidelines for student run clinics. They describe the motivations of clinic staff, the day to day work of a family nurse practitioner working in clinics and teaching at a university, the challenges and rewards of providing health care for homeless people and more. Student run clinics are the topic of the second section in addition to providing care to a small subset of those in need, student run clinics are an important venue for training future clinicians and helping the seeds of altruism with which many enter their professions to germinate. *Free Clinics* will be useful to policymakers, students and faculty in public health and health policy programs and clinicians and students who are embarking on launching new clinics.

*Free Will and Consciousness* Gregg D. Caruso, 2012-02-23 In recent decades with advances in the behavioral, cognitive and neurosciences, the idea that patterns of human behavior may ultimately be due to factors beyond our conscious control has increasingly gained traction and renewed interest in the age old problem of free will. In this book Gregg D. Caruso examines both the traditional philosophical problems long associated with the question of free will such as the relationship between determinism and free will as well as recent experimental and theoretical work directly related to consciousness and human agency. He argues that our best scientific theories indeed have the consequence that factors beyond our control produce all of the actions we perform and that because of this we do not possess the kind of free will required for genuine or ultimate responsibility. It is further argued that the strong and pervasive belief in free will which the author considers an illusion can be accounted for through a careful analysis of our phenomenology and a proper theoretical understanding of consciousness. Indeed the primary goal of this book is to argue that our subjective feeling of freedom as reflected in the first person phenomenology of agentive experience is an illusion created by certain aspects of our consciousness.
