Perspectives on Environment and Behavior Daniel Stokols,2013-11-11 The inception of this volume can be traced to a series of Environmental Psychology Colloquia presented at the University of California Irvine during the spring of 1974 These colloquia were held in conjunction with Social Ecology 252 a graduate seminar on Man and the Environment Although the eight colloquia covered a wide range of topics and exemplified a diversity of research techniques they seemed to converge on some common theoretical and methodological assumptions about the nature of environment behavioral research The apparent continuities among these colloquia suggested the utility of developing a manuscript that would provide a historical overview of research on environment and behavior a representation of its major concerns and an analysis of its conceptual and empirical trends Thus expanded versions of the initial presentations were integrated with a supplemental set of invited manuscripts to yield the present volume of original contributions by leading researchers in the areas of ecological and environmental psychology

Advances in Environmental Psychology (Volume 5) Andrew Baum,Jerome E. Singer,2020-09-10 The development of a field or an area of inquiry is often marked by changes in measurement techniques shifts in analytic emphasis and disputes over the best ways of doing research In many areas of psychology a number of issues have characterized methodological evolution of the discipline including questions regarding context and reductionism or laboratory versus field research For some of the newer areas in psychology such as environment or health psychology this is not an issue of either or Although there has been some debate about these trade offs it is generally regarded by people in this field that some combination of the two approaches is essential Depending on the question being studied this balance may change However the questions asked are less likely to inquire which way is better and concentrate on how both may be used This observation serves to illustrate the fact that different research endeavours have different methodological issues Originally published in 1985 this volume explores some of the issues characterizing work on health environment and behavior
