species as fundamental units in biology This stage of fundamental rethinking is however overshadowed by the threat of ecological disaster and catastrophic population increase which not only impose limits to development but undermine the very survival of Humankind The future survival of our species in fact depends on the interaction between its reproductive characteristics and the productivity of the territory which even if increased by the intellectual capability of the human brain has intrinsically limited The adaptive choices which are also biotechnological and biomedical of the interaction between human population and the natural environment is the conceptual basis of the new discipline Global Bioethics
