Renewable Energy In The Uk:

Renewable Energy in the UK David Elliott, 2019-01-08 This book offers a detailed account of how renewable energy has moved from the margins to the mainstream in the UK and of the battles that have been fought to achieve this trawling through the often troubled history of government involvement The book examines how renewables became what now seem likely to be the dominant energy sources of the future Renewable energy technologies using solar and wind power and other natural energy sources are now supplying around 30% of UK electricity and appear set to continue expanding to supply around 50% within the next decade Although the emphasis of the book is on the UK developments there are compared with those in other countries to provide an overall assessment of the relevance of the UK experience Chapters explore why the UK still lags behind many other countries in deploying renewables in part it is argued due to its continued reliance on nuclear power The book ends with a discussion on what sort of changes may be expected over the coming years The author does not assume a single answer but invites readers to consider the possibilities **Renewable Energy** Pauline Marstrand, 1990

The UK Renewable Energy Strategy Great Britain. Department of Energy and Climate Change, 2009 This document sets out the Government's plans for a radical increase in the UK's use of renewable electricity heat and transport which will meet the legally binding target of 15 per cent of energy coming from renewable sources by 2020 This Strategy will help tackle climate change reducing the UK's emissions of carbon dioxide by over 750 million tonnes between now and 2030 It will also promote the security of UK energy supply reducing our overall fossil fuel demand by around 10 per cent and gas imports by 20-30 per cent against what they would have been in 2020 And it will provide opportunities for the UK economy with the potential to create up to half a million more jobs in the UK renewable energy sector resulting from around 100 billion of new investment In parallel with energy saving nuclear and carbon capture and storage this is a key element for setting the UK on the path to achieve a low carbon sustainable future that helps address dangerous climate change This strategy could result in more than 30 per cent of electricity and 12 per cent of heat generated from renewables and 10 per cent of transport energy from renewables The Government will provide financial support for renewable electricity and heat worth around 30 billion between now and 2020 drive delivery and clear away barriers through the Office for Renewable Energy Deployment increase investment in emerging technologies and pursue new sources of supply create new opportunities for individuals communities and business to harness renewable energy The UK Low Carbon Transition Plan is published alongside this document ISBN 9780108508394 **The EU's Target for Renewable Energy** Great Britain.
