Renewing Our Energy Future:

Innovative Energy Strategies for CO2 Stabilization Robert G. Watts, 2002-07-11 The vast majority of the world's climate scientists believe that the build up of heat trapping CO2 in the atmosphere will lead to global warming unless we burn less fossil fuels. At the same time energy must be supplied in increasing amounts for the developing world to continue its growth. This book discusses the feasibility of increasingly efficient energy use and the potential for supplying energy from sources that do not introduce CO2. The book analyses the prospects for Earth based renewables: solar, wind, biomass, hydroelectricity, geothermal, and ocean energy. It then discusses nuclear fission and fusion and the relatively new idea of harvesting solar energy on satellites or lunar bases. It will be essential reading for all those interested in energy issues including engineers and physicists, electrical, mechanical, chemical, industrial, environmental, nuclear, and industrial leaders and politicians. It will also be used as a supplementary textbook on advanced courses on energy.

The ZEDbook Bill Dunster, 2021-11-02 Though few now doubt the severity of the environmental problems faced by humanity, there is still resistance from businesses, developers, architects, planners, and government when it comes to making the step changes necessary to make our lifestyles sustainable. Based on the experience gained from their involvement in the pioneering Beddington Zero Emission Development or BedZED in London and subsequent innovative schemes, The ZEDbook authors present a bold, coherent, and refreshing vision of a low carbon future. In three comprehensive sections, The ZEDbook leads the reader from basic ZEDliving principles through building physics and architectural design details to a carefully selected array of informative case studies. The ZEDbook is a must have purchase for anyone wanting to make communities and the built environment more sustainable.

Solar Energy, Technology Policy, and Institutional Values Frank N. Laird, 2001-03-26 Energy policies that promote new technologies and energy sources are policies for the future. They influence the shape of emergent technological systems and also condition our social, political, and economic lives. *Solar Energy Technology Policy and Institutional Values* demonstrates the difficulties of deliberating such properties by providing a historical case study that analyses US renewable energy policy from the end of World War II through the energy crisis of the 1970s. The book illuminates the ways beliefs and values come to dominate official problem frames and get entrenched in institutions. In doing so, it also explains why advocates of renewable energy have often faced ideological opposition and why policy makers fail to take them seriously.

Renewing Our Energy Future Gordon Press Publishers, 1997-06 Evaluates the potential for cost effective renewable energy in the coming decades and the actions that have to be taken to achieve the potential. Some applications, especially wind and bioenergy, are already competitive with conventional technologies. Others, such as photovoltaics, have great promise but will require significant R&D. Residential and commercial buildings, transport, electricity technology development, and market challenges and government supports and international competition.
