Renormalization And 3 Manifolds Which Fiber Over The Circle:

Renormalization and 3-Manifolds Which Fiber over the Circle Curtis T. McMullen, 2014-09-08 Many parallels between complex dynamics and hyperbolic geometry have emerged in the past decade Building on work of Sullivan and Thurston this book gives a unified treatment of the construction of fixed points for renormalization and the construction of hyperbolic 3 manifolds fibering over the circle Both subjects are studied via geometric limits and rigidity This approach shows open hyperbolic manifolds are inflexible and yields quantitative counterparts to Mostow rigidity In complex dynamics it motivates the construction of towers of quadratic like maps and leads to a quantitative proof of convergence of renormalization

Renormalization and 3-manifolds which Fiber Over the Circle Curtis T. McMullen, 1996-07-28 Many parallels between complex dynamics and hyperbolic geometry have emerged in the past decade Building on work of Sullivan and Thurston this book gives a unified treatment of the construction of fixed points for renormalization and the construction of hyperbolic 3 manifolds fibering over the circle Both subjects are studied via geometric limits and rigidity This approach shows open hyperbolic manifolds are inflexible and yields quantitative counterparts to Mostow rigidity In complex dynamics it motivates the construction of towers of quadratic like maps and leads to a quantitative proof of convergence of renormalization

Topology and Geometry of Manifolds Gordana Matic, Clint McCrory, 2003 Since 1961 the Georgia Topology Conference has been held every eight years to discuss the newest developments in topology The goals of the conference are to disseminate new and important results and to encourage interaction among topologists who are in different stages of their careers Invited speakers are encouraged to aim their talks to a broad audience and several talks are organized to introduce graduate students to topics of current interest Each conference results in high quality surveys new research and lists of unsolved problems some of which are then formally published Continuing in this 40 year tradition the AMS presents this volume of articles and problem lists from the 2001 conference Topics covered include symplectic and contact topology foliations and laminations and invariants of manifolds and knots Articles of particular interest include John Etnyre s Introductory Lectures on Contact Geometry which is a beautiful expository paper that explains the background and setting for many of the other papers This is an excellent introduction to the subject for graduate students in neighboring fields Etnyre and Lenhard Ng s Problems in Low Dimensional Contact Topology and Danny Calegari s extensive paper Problems in Foliations and Laminations of 3 Manifolds are carefully selected problems in keeping with the tradition of the conference They were compiled by Etnyre and Ng and by Calegari with the input of many who were present This book provides material of current interest to graduate students and research mathematicians interested in the geometry and topology of manifolds

Kleinian Groups and Hyperbolic 3-Manifolds Y. Komori, V. Markovic, C. Series, 2003-11-10 The subject of Kleinian groups and hyperbolic 3 manifolds is currently undergoing explosively fast development with many old problems and conjectures close to resolution This volume proceedings of the Warwick workshop in September 2001 contains expositions of

many of these breakthroughs including Minsky's lectures on the first half of the proof of the Ending Lamination Conjecture the Bers Density Conjecture by Brock and Bromberg the Tameness Conjecture by Kleiner and Souto the state of the art in cone manifolds by Hodgson and Kerckhoff and the counter example to Thurston's K 2 conjecture by Epstein Marden and Markovic It also contains Jørgensen's famous paper On pairs of once punctured tori in print for the first time The excellent collection of papers here will appeal to graduate students who will find much here to inspire them and established researchers who will find this valuable as a snapshot of current research

New Research on Three-manifolds and Mathematics Samuel F. Neilson, 2006 Mathematics has been behind many of humanity's most significant advances in fields as varied as genome sequencing medical science space exploration and computer technology But those breakthroughs were yesterday Where will mathematicians lead us tomorrow and can we help shape that destiny This book assembles carefully selected articles highlighting and explaining cutting edge research and scholarship in mathematics with an emphasis on three manifolds

The Hyperbolization Theorem for Fibered 3-Manifolds Jean-Pierre Otal, 2001 For graduate students familiar with low dimensional topology and researchers in geometry and topology Otal CNRS UMR 128 Lyon offers a complete proof of Thurston's hyperbolization theorem for 3 manifolds that fiber as surface bundles The original Le Theoreme d'Hyperbolisation pour les Varietes de Dimension 3 published by the French Mathematical Society in 1996 has been translated by Leslie D Kay c Book News Inc

Collected Works of William P. Thurston with Commentary Benson Farb, David Gabai, Steven P. Kerckhoff, 2023-06-02 William Thurston's work has had a profound influence on mathematics He connected whole mathematical subjects in entirely new ways and changed the way mathematicians think about geometry topology foliations group theory dynamical systems and the way these areas interact His emphasis on understanding and imagination in mathematical learning and thinking are integral elements of his distinctive legacy This four part collection brings together in one place Thurston's major writings many of which are appearing in publication for the first time Volumes I III contain commentaries by the Editors Volume IV includes a preface by Steven P Kerckhoff Volume II contains William Thurston's papers on the geometry and topology of 3 manifolds on complexity constructions and computers and on geometric group theory

Handbook of Geometric Topology R.B. Sher, R.J. Daverman, 2001-12-20 Geometric Topology is a foundational component of modern mathematics involving the study of spatial properties and invariants of familiar objects such as manifolds and complexes This volume which is intended both as an introduction to the subject and as a wide ranging resource for those already grounded in it consists of 21 expository surveys written by leading experts and covering active areas of current research They provide the reader with an up to date overview of this flourishing branch of mathematics

Hyperbolic Manifolds Albert Marden, 2016-02 This study of hyperbolic geometry has both pedagogy and research in mind and includes exercises and further reading for each chapter

In the Tradition of Thurston Ken'ichi Ohshika, Athanase Papadopoulos, 2020-12-07 This book consists of 16 surveys on Thurston's work and its later development The authors are

mathematicians who were strongly influenced by Thurston's publications and ideas. The subjects discussed include, among others, knot theory, the topology of 3-manifolds, circle packings, complex projective structures, hyperbolic geometry, Kleinian groups, foliations, mapping class groups, Teichmüller theory, anti-de Sitter geometry, and co-Minkowski geometry. The book is addressed to researchers and students who want to learn about Thurston's wide-ranging mathematical ideas and their impact. At the same time, it is a tribute to Thurston, one of the greatest geometers of all time, whose work extended over many fields in mathematics and who had a unique way of perceiving forms and patterns and of communicating and writing mathematics.
