Renormalization Group Giuseppe Benfatto, 1995

Non-perturbative Renormalization Vieri Mastropietro, 2008

Differential algebraic equations DAEs provide an essential tool for system modeling and analysis within different fields of applied sciences and engineering This book addresses modeling issues and analytical properties of DAEs together with some applications in electrical circuit theory Beginning with elementary aspects the author succeeds in providing a self contained and comprehensive presentation of several advanced topics in DAE theory such as the full characterization of linear time varying equations via projector methods or the geometric reduction of nonlinear systems Recent results on singularities are extensively discussed The book also addresses in detail differential algebraic models of electrical and electronic circuits including index characterizations and qualitative aspects of circuit dynamics In particular the reader will find a thorough discussion of the state semistate dichotomy in circuit modeling The state formulation problem which has attracted much attention in the engineering literature is cleverly tackled here as a reduction problem on semistate models

Renormalization Group Giuseppe Benfatto, Giovanni Gallavotti, 2020-11-10 Scaling and self similarity ideas and methods in theoretical physics have in the last twenty five years coalesced into renormalization group methods This book analyzes from a single perspective some of the most important applications the critical point theory in classical statistical mechanics the scalar quantum field theories in two and three space time dimensions and Tomonaga s theory of the ground state of one dimensional Fermi systems The dimension dependence is discussed together with the related existence of anomalies in Tomonaga s theory and in 4 e dimensions for the critical point The theory of Bose condensation at zero temperature in three space dimensions is also considered Attention is focused on results that can in principle be formally established from a mathematical point of view The 4 e dimensions theory Bose condensation as well as a few other statements are exceptions to this rule because no complete treatment is yet available However the truly mathematical details are intentionally omitted and only referred to This is done with the purpose of stressing the unifying conceptual structure rather than the technical differences or subtleties Conceptual Foundations of Quantum Field Theory Tian Yu
