Representation Theory And Algebraic Geometry:

Representations of Algebraic Groups Jens Carsten Jantzen, 2003-01-01 Now back in print by the AMS this is a significantly revised edition of a book originally published in 1987 by Academic Press This book gives the reader an introduction to the theory of algebraic representations of reductive algebraic groups To develop appropriate techniques the first part of the book is an introduction to the general theory of representations of algebraic group schemes Here the author describes important basic notions induction functors cohomology quotients Frobenius kernels and reduction mod p among others The second part of the book is devoted to the representation theory of reductive algebraic groups It includes topics such as the description of simple modules vanishing theorems the Borel Bott Weil theorem and Weyl's character formula and Schubert schemes and line bundles on them For this revised edition the author added nearly 150 pages of new material describing some later developments among them Schur algebras Lusztig's conjecture and Kazhdan Lusztig polynomials tilting modules and representations of quantum groups He also made major revisions to parts of the old text Jantzen's book continues to be the ultimate source of information on representations of algebraic groups in finite characteristics It is suitable for graduate students and research mathematicians interested in algebraic groups and their representations

Representation Theories and Algebraic Geometry A. Broer, 1998-07-31 The 12 lectures presented in Representation Theories and Algebraic Geometry focus on the very rich and powerful interplay between algebraic geometry and the representation theories of various modern mathematical structures such as reductive groups quantum groups Hecke algebras restricted Lie algebras and their companions This interplay has been extensively exploited during recent years resulting in great progress in these representation theories Conversely a great stimulus has been given to the development of such geometric theories as D modules perverse sheafs and equivariant intersection cohomology The range of topics covered is wide from equivariant Chow groups decomposition classes and Schubert varieties multiplicity free actions convolution algebras standard monomial theory and canonical bases to annihilators of quantum Verma modules modular representation theory of Lie algebras and combinatorics of representation categories of Harish Chandra modules Representation Theory and Algebraic Geometry A. Martsinkovsky, Gordana Todorov, 1997-05-15 For any researcher working in representation theory algebraic or arithmetic geometry **Geometry of Moduli Spaces and Representation Theory** Roman

Bezrukavnikov, Alexander Braverman, Zhiwei Yun, 2017-12-15 This book is based on lectures given at the Graduate Summer School of the 2015 Park City Mathematics Institute program Geometry of moduli spaces and representation theory and is devoted to several interrelated topics in algebraic geometry topology of algebraic varieties and representation theory Geometric representation theory is a young but fast developing research area at the intersection of these subjects An early profound achievement was the famous conjecture by Kazhdan Lusztig about characters of highest weight modules over a complex semi simple Lie algebra and its subsequent proof by Beilinson Bernstein and Brylinski Kashiwara Two remarkable

features of this proof have inspired much of subsequent development intricate algebraic data turned out to be encoded in topological invariants of singular geometric spaces while proving this fact required deep general theorems from algebraic geometry Another focus of the program was enumerative algebraic geometry Recent progress showed the role of Lie theoretic structures in problems such as calculation of quantum cohomology K theory etc Although the motivation and technical background of these constructions is quite different from that of geometric Langlands duality both theories deal with topological invariants of moduli spaces of maps from a target of complex dimension one Thus they are at least heuristically related while several recent works indicate possible strong technical connections The main goal of this collection of notes is to provide young researchers and experts alike with an introduction to these areas of active research and promote interaction between the two related directions

Representation Theory and Algebraic Geometry Vladimir Baranovsky, Nicolas Guay, Travis Schedler, 2022-06-15 The chapters in this volume explore the influence of the Russian school on the development of algebraic geometry and representation theory particularly the pioneering work of two of its illustrious members Alexander Beilinson and Victor Ginzburg in celebration of their 60th birthdays Based on the work of speakers and invited participants at the conference Interactions Between Representation Theory and Algebraic Geometry held at the University of Chicago August 21-25 2017 this volume illustrates the impact of their research and how it has shaped the development of various branches of mathematics through the use of D modules the affine Grassmannian symplectic algebraic geometry and other topics All authors have been deeply influenced by their ideas and present here cutting edge developments on modern topics Chapters are organized around three distinct themes Groups algebras categories and representation theory D modules and perverse sheaves Analogous varieties defined by quivers Representation Theory and Algebraic Geometry will be an ideal resource for researchers who work in the area particularly those interested in exploring the impact of the Russian school

Noncommutative Algebraic Geometry Gwyn Bellamy, Daniel Rogalski, Travis Schedler, J. Toby Stafford, Michael Wemyss, 2016-06-20 This book provides a comprehensive introduction to the interactions between noncommutative algebra and classical algebraic geometry

[Algebra - Representation Theory](#) Klaus W. Roggenkamp, Mirela Stefanescu, 2001-08-31 Over the last three decades representation theory of groups Lie algebras and associative algebras has undergone a rapid development through the powerful tool of almost split sequences and the Auslander Reiten quiver Further insight into the homology of finite groups has illuminated their representation theory The study of Hopf algebras and non commutative geometry is another new branch of representation theory which pushes the classical theory further All this can only be seen in connection with an understanding of the structure of special classes of rings The aim of this book is to introduce the reader to some modern developments in Lie algebras quantum groups Hopf algebras and algebraic groups non commutative algebraic geometry representation theory of finite groups and cohomology the structure of special classes of rings

Vector Bundles and Representation Theory Steven Dale Cutkosky, 2003 This

volume contains 13 papers from the conference on Hilbert Schemes Vector Bundles and Their Interplay with Representation Theory The papers are written by leading mathematicians in algebraic geometry and representation theory and present the latest developments in the field Among other contributions the volume includes several very impressive and elegant theorems in representation theory by R Friedman and J W Morgan convolution on homology groups of moduli spaces of sheaves on K3 surfaces by H Nakajima and computation of the S1 fixed points in Quot schemes and mirror principle computations for Grassmanians by S T Yau et al The book is of interest to graduate students and researchers in algebraic geometry representation theory topology and their applications to high energy physics Abstract Algebra Gerhard Rosenberger, Annika Schürenberg, Leonard Wienke, 2024-07-22 Abstract algebra is the study of algebraic structures like groups rings and fields This book provides an account of the theoretical foundations including applications to Galois Theory Algebraic Geometry and Representation Theory It implements the pedagogic approach to conveying algebra from the perspective of rings The 3rd edition provides a revised and extended versions of the chapters on Algebraic Cryptography and Geometric Group Theory A Tribute to C.S. Seshadri Venkatrama Lakshmibai, V. Balaji, V. B. Mehta, K. R. Nagarajan, K. Paranjape, P. Sankaran, R. Sridharan, 2003-07-24 C S Seshadri turned seventy on the 29th of February 2002 To mark this occasion a symposium was held in Chennai India where some of his colleagues gave expository talks highlighting Seshadri s contributions to mathematics This volume includes expanded texts of these talks as well as research and expository papers on geometry and representation theory It will serve as an excellent reference for researchers and students in these areas
