 David A. Craven, 2019-08-30 This book provides an accessible introduction to the state of the art of representation theory of
 finite groups Starting from a basic level that is summarized at the start the book proceeds to cover topics of current research
 interest including open problems and conjectures The central themes of the book are block theory and module theory of
 group representations which are comprehensively surveyed with a full bibliography The individual chapters cover a range of
 topics within the subject from blocks with cyclic defect groups to representations of symmetric groups Assuming only modest
 background knowledge at the level of a first graduate course in algebra this guidebook intended for students taking first
 steps in the field will also provide a reference for more experienced researchers Although no proofs are included end of
 chapter exercises make it suitable for student seminars **Algebra - Representation Theory** Klaus W.
 Roggenkamp, Mirela Stefanescu, 2001-08-31 Over the last three decades representation theory of groups Lie algebras and
 associative algebras has undergone a rapid development through the powerful tool of almost split sequences and the
 Auslander Reiten quiver Further insight into the homology of finite groups has illuminated their representation theory The
 study of Hopf algebras and non commutative geometry is another new branch of representation theory which pushes the
 classical theory further All this can only be seen in connection with an understanding of the structure of special classes of
 rings The aim of this book is to introduce the reader to some modern developments in Lie algebras quantum groups Hopf
 algebras and algebraic groups non commutative algebraic geometry representation theory of finite groups and cohomology
 the structure of special classes of rings **Modular Representation Theory of Finite Groups** Peter
 Schneider, 2012-11-27 Representation theory studies maps from groups into the general linear group of a finite dimensional
 vector space For finite groups the theory comes in two distinct flavours In the semisimple case for example over the field of
 complex numbers one can use character theory to completely understand the representations This by far is not sufficient

when the characteristic of the field divides the order of the group Modular Representation Theory of finite Groups comprises this second situation Many additional tools are needed for this case To mention some there is the systematic use of Grothendieck groups leading to the Cartan matrix and the decomposition matrix of the group as well as Green's direct analysis of indecomposable representations There is also the strategy of writing the category of all representations as the direct product of certain subcategories the so called blocks of the group Brauer's work then establishes correspondences between the blocks of the original group and blocks of certain subgroups the philosophy being that one is thereby reduced to a simpler situation In particular one can measure how nonsemisimple a category a block is by the size and structure of its so called defect group All these concepts are made explicit for the example of the special linear group of two by two matrices over a finite prime field Although the presentation is strongly biased towards the module theoretic point of view an attempt is made to strike a certain balance by also showing the reader the group theoretic approach In particular in the case of defect groups a detailed proof of the equivalence of the two approaches is given This book aims to familiarize students at the masters level with the basic results tools and techniques of a beautiful and important algebraic theory Some basic algebra together with the semisimple case are assumed to be known although all facts to be used are restated without proofs in the text Otherwise the book is entirely self contained

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry

Geometry, Topology, and Mathematical Physics V. M. Buchstaber, I. M. Krichever, 2008-01-01 This volume contains a selection of papers based on presentations given in 2006-2007 at the S. P. Novikov Seminar at the Steklov Mathematical Institute in Moscow. Novikov's diverse interests are reflected in the topics presented in the book. The articles address topics in geometry, topology, and mathematical physics. The volume is suitable for graduate students and researchers interested in the corresponding areas of mathematics and physics.
