Representation Theory Selected Papers:

Representation Theory: Selected Papers, 1982 The unifying theme of this collection of papers by the very creative Russian mathematician I M Gelfand and his co workers is the representation theory of groups and lattices

Representation Theory Izrail' Moiseevich Gel'fand, 1982-11-18 The unifying theme of this collection of papers by the very creative Russian mathematician I M Gelfand and his co workers is the representation theory of groups and lattices Two of the papers were inspired by application to theoretical physics the others are pure mathematics though all the papers will interest mathematicians at quite opposite ends of the subject Dr G Segal and Professor C M Ringel have written introductions to the papers which explain the background put them in perspective and make them accessible to those with no specialist knowledge in the area

The authors have extended their papers to give a more in depth discussion of the theory or of the experimental validation of the method they have proposed The topics covered are current and wide ranging and include both 2D and 3D vision and low to high level vision

Selected Works of Ilya Piatetski-Shapiro James Cogdell, Simon Gindikin, Peter Sarnak, 2022-11-03 This selection of papers of I Piatetski Shapiro represents almost 50 years of his mathematical activity Included are many of his major papers in harmonic analysis number theory discrete groups bounded homogeneous domains algebraic geometry automorphic forms and automorphic L functions The papers in the volume are intended as a representative and accurate reflection of both the breadth and depth of Piatetski Shapiro's work in mathematics Some of his early works such as those on the prime number theorem and on sets of uniqueness for trigonometric series appear for the first time in English Also included are several commentaries by his close colleagues This volume offers an elegant representation of the contributions made by this renowned mathematician

Representation Theory and Mathematical Physics Jeffrey Adams, Bong

Lian, Siddhartha Sahi, 2011-11-07 This volume contains the proceedings of the conference on Representation Theory and Mathematical Physics in honor of Gregg Zuckerman's 60th birthday held October 24-27, 2009 at Yale University. Lie groups and their representations play a fundamental role in mathematics in particular because of connections to geometry, topology, number theory, physics, combinatorics, and many other areas. Representation theory is one of the cornerstones of the Langlands program in number theory, dating to the 1970s. Zuckerman's work on derived functors, the translation principle, and coherent continuation lie at the heart of the modern theory of representations of Lie groups. One of the major unsolved problems in representation theory is that of the unitary dual. The fact that there is in principle a finite algorithm for computing the unitary dual relies heavily on Zuckerman's work. In recent years there has been a fruitful interplay between mathematics and physics in geometric representation theory, string theory, and other areas. New developments on chiral algebras, representation theory of affine Kac-Moody algebras, and the geometric Langlands correspondence are some of the focal points of this volume. Recent developments in the geometric Langlands program point to exciting connections between certain automorphic representations and dual fibrations in geometric mirror symmetry. *Selected Works of Ilya Piatetski-Shapiro* Il'ia Iosifovich Piatetski-Shapiro, 2000 Piatetski-Shapiro himself, with the consultation of the editors, selected these 162 papers, some of which appear in English for the first time. Together they represent almost 50 years of his service to mathematics, and though arranged by subject, are nearly in chronological order. Each of the sections concludes with commentary on the entire work of Piatetski-Shapiro's in that area, including related developments. Following his autobiographical *Etude on life and automorphic forms in the Soviet Union*, sections cover early papers in harmonic analysis and number theory, automorphic functions and discrete groups, bounded homogeneous domains, applied mathematics, algebraic geometry, automorphic L-functions and theta lifts, and applications to generalized Ramanujan conjectures. Books and long papers have been excluded. No index. Annotation copyrighted by Book News, Inc., Portland, OR. **Selected Papers on Harmonic Analysis, Groups, and Invariants** Katsumi Nomizu, 1997 The five papers originally appeared in Japanese in the journal *Sugaku* and would ordinarily appear in the Society's translation of that journal, but are published separately here to expedite their dissemination. They explore such aspects as representation theory, differential geometry, invariant theory, and complex analysis. No index. Member prices are \$47 for institutions and \$35 for individuals.
