Representing And Reasoning With Probabilistic Knowledge A Logical Approach To Probabilities:

Representing and Reasoning with Probabilistic Knowledge Fahiem Bacchus, 1990 Probabilistic information has many uses in an intelligent system This book explores logical formalisms for representing and reasoning with probabilistic information that will be of particular value to researchers in nonmonotonic reasoning applications of probabilities and knowledge representation It demonstrates that probabilities are not limited to particular applications like expert systems they have an important role to play in the formal design and specification of intelligent systems in general Fahiem Bacchus focuses on two distinct notions of probabilities one propositional involving degrees of belief the other proportional involving statistics He constructs distinct logics with different semantics for each type of probability that are a significant advance in the formal tools available for representing and reasoning with probabilities These logics can represent an extensive variety of qualitative assertions eliminating requirements for exact point valued probabilities and they can represent firstshy order logical information The logics also have proof theories which give a formal specification for a class of reasoning that subsumes and integrates most of the probabilistic reasoning schemes so far developed in AI Using the new logical tools to connect statistical with propositional probability Bacchus also proposes a system of direct inference in which degrees of belief can be inferred from statistical knowledge and demonstrates how this mechanism can be applied to yield a powerful and intuitively satisfying system of defeasible or default reasoning Fahiem Bacchus is Assistant Professor of Computer Science at the University of Waterloo Ontario Contents Introduction Propositional Probabilities Statistical Probabilities Combining Statistical and Propositional Probabilities Default Inferences from Statistical Knowledge **Handbook of Defeasible Reasoning and Uncertainty Management Systems** Dov M. Gabbay, Philippe Smets, 2013-04-17 Reasoning under uncertainty is always based on a specified language or formalism including its particular syntax and semantics but also on its associated inference mechanism In the present volume of the handbook the last aspect the algorithmic aspects of uncertainty calculi are presented Theory has sufficiently advanced to unfold some generally applicable fundamental structures and methods On the other hand particular features of specific formalisms and approaches to uncertainty of course still influence strongly the computational methods to be used Both general as well as specific methods are included in this volume Broadly speaking symbolic or logical approaches to uncertainty and numerical approaches are often distinguished Although this distinction is somewhat misleading it is used as a means to structure the present volume This is even to some degree reflected in the two first chapters which treat fundamental general methods of computation in systems designed to represent uncertainty It has been noted early by Shenoy and Shafer that computations in different domains have an underlying common structure Essentially pieces of knowledge or information are to be combined together and then focused on some particular question or domain This can be captured in an algebraic structure called valuation algebra which is described in the first chapter Here the basic operations of combination and focusing marginalization of knowledge and

information is modeled abstractly subject to simple axioms

Innovations in Bayesian Networks Dawn E.

Holmes,2008-09-10 Bayesian networks currently provide one of the most rapidly growing areas of research in computer science and statistics In compiling this volume we have brought together contributions from some of the most prestigious researchers in this field Each of the twelve chapters is self contained Both theoreticians and application scientists engineers in the broad area of artificial intelligence will find this volume valuable It also provides a useful sourcebook for Graduate students since it shows the direction of current research

Uncertainty in Artificial Intelligence David Heckerman,Abe

Mamdani,2014-05-12 Uncertainty in Artificial Intelligence contains the proceedings of the Ninth Conference on Uncertainty in Artificial Intelligence held at the Catholic University of America in Washington DC on July 9 11 1993 The papers focus on methods of reasoning and decision making under uncertainty as applied to problems in artificial intelligence AI and cover topics ranging from knowledge acquisition and automated model construction to learning planning temporal reasoning and machine vision Comprised of 66 chapters this book begins with a discussion on causality in Bayesian belief networks before turning to a decision theoretic account of conditional ought statements that rectifies glaring deficiencies in classical deontic logic and forms a sound basis for qualitative decision theory Subsequent chapters explore trade offs in constructing and evaluating temporal influence diagrams normative engineering risk management systems additive belief network models and sensitivity analysis for probability assessments in Bayesian networks Automated model construction and learning as well as algorithms for inference and decision making are also considered This monograph will be of interest to both students and practitioners in the fields of AI and computer science

Perspectives on Logics for Data-driven Reasoning Hykel

Hosni,Jürgen Landes,2025-01-21 This book calls for a rethinking of logic as the core methodological tool for scientific reasoning in the context of a steadily increasing emphasis on data centered science To do so it provides a state of the art presentation of the role logic can have in making the most of the current opportunities while making explicit the key challenges opened up by the data driven age of scientific research Particular attention is given to the following four core fields and applications Reasoning with correlations medical life science applications logics for statistical inference machine learning and societal applications thereof reasoning with evidence defining good evidence causal reasoning forensic reasoning The book collects contributions from key logicians methodologists and scientists This multidisciplinary perspective benefits both scientists and logicians interested in data driven science Scientists are introduced to logics that go beyond classical and thus are applicable to reasoning with data Logicians have a change to focus on the potential applications of their methods and techniques to pressing scientific problems This book is therefore of interest to scientists and logicians working on data centered science

Nonmonotonic Reasoning Dritan Berzati,2007

The capability to reason in a world full of uncertainties vagueness and ignorance is what distinguishes humans This ability to argument in a partially known world is the informal definition of common sense reasoning The question how common sense reasoning is performed

occupied humanity since we can think of Last century this issue reached an immense importance Especially during the last three decades the study of common sense reasoning became one of the major research topics in Artificial Intelligence AI Several formalisms to capture the mechanism of common sense reasoning have been proposed so far This book concentrates on presenting the most important formalisms for common sense reasoning and showing that one of the discussed formalisms serves perfectly to capture the mechanism of common sense reasoning since this formalism subsumes all other in this book introduced formalisms dealing with common sense reasoning Computational Logic in Multi-Agent Systems Katsumi Inoue, Ken Satoh, Francesca Toni, 2007-05-16 This book constitutes the thoroughly refereed post proceedings of the 7th International Workshop on Computational Logic for Multi Agent Systems CLIMA VII held in Hakodate Japan in May 2006 It was an associated event of AAMAS 2006 the main international conference on autonomous agents and multi agent systems The series of workshops presents current work on application of general and declarative theories **Uncertainty Reasoning for the Semantic Web III** Fernando Bobillo, Rommel N.
