marine vessel spills or accidental industrial releases Anaesthesia, Pain, Intensive Care and Emergency Medicine — A.P.I.C.E. Antonio Gullo, 2012-12-06 This critical care medicine book substantially differs from others due to the range of peculiarities that characterize it Since it deals with acute patients in critical conditions this is as it were a borderline book in the sense that it is intended for those who in their activity need a continuous and in depth interdisciplinary approach to optimize the quality of the treatments offered to critically ill patients This book helps to have a better understanding of the current limits of human intervention and aims at supplying updated guidelines in particular it is intended for those who although having to guarantee continuity and top quality therapies must decide when and why the collaboration with and intervention by experts is necessary Doing Research in Emergency and Acute Care Michael P. Wilson, Kama Z. Guluma, Stephen R. Hayden, 2016-03-02 A practical guide to understanding and navigating the unique challenges faced by physicians and other professionals who wish to undertake research in the ED or other acute care setting Focusing on the hyper acute and acute care environment and fulfilling two closely related needs 1 the need for even seasoned researchers to understand the specific logistics and issues of doing research in the ED and 2 the need to educate clinically active physicians in research methodology This new text is not designed to be a complex encyclopedic resource but instead a concise easy to read resource designed to convey key need to know information within a comprehensive framework Aimed at the busy brain either as a sit down read or as a selectively read reference guide to fill in knowledge gaps chapters are short compartmentalized and are used strategically throughout the text in order to introduce and frame concepts This format makes it easy and even entertaining for the research novice to integrate and absorb completely new and typically dry material The textbook addresses aspects of feasibility efficiency ethics statistics safety logistics and collaboration in acute research Overall it grants access for the seasoned researcher seeking to learn about acute research to empathically integrate learning points into his or her knowledge base As the ED is the primary setting for hyper acute and acute care and therefore a prime site for related clinical trial recruitment and interventions the book presents specific logistical research challenges that researchers from any discipline including physicians research nurse coordinators study monitors or industry partners need to understand in order to succeed
