Reproduction And Antibody Response:

Reproduction and the Inflammatory Response Yang Yu, John Even Schjenken, Hsun Ming Chang, 2022-03-02

Reproductive Immunology Satish Kumar Gupta, 2012-12-06 Reproductive Immunology is a compilation of research articles presented during the VII International Congress of Reproductive Immunology which was held in New Delhi India on 27-30 October 1998. The articles pertain to the following six major themes: Molecular and Immunological Aspects of Sperm-Egg Interaction, Embryonic Endometrial Cross-Talk, Immunobiology of Pregnancy, Autoantibodies and Infertility, Immunocontraception, Mucosal Immunology and Reproductive Tract Infections. The first section deals with our current understanding of various steps involved in fertilization. The functional significance of sperm surface mannosidase and glutathione S-transferases to bind zona pellucida is described. The role of zona pellucida glycoproteins in the binding of sperm, induction of acrosome reactions and avoidance of polyspermy is discussed. In the second section, the role of various cytokines, growth factors and immunomodulatory agents in implantation of embryos is described. In the field of reproductive immunology, one of the major issues is to explore the successful gestation of the histoincompatible fetus in the uterus of an immunologically competent mother. The Proceedings presents the issues of paternal antigens at the feto-maternal interface and shows that Th2 type of immunity is involved in normal successful conception. The role of membrane-bound and soluble HLA-G in protecting the fetus from the lytic activities of maternal uterine and peripheral blood natural killer (NK) cells is also presented. Nature's experiments suggest that antibodies against sperm-specific antigens are responsible for infertility in some women. The possibility that an immunogenetic background contributes to production of sperm-immobilizing antibodies in infertile women is discussed in the section on autoantibodies and infertility. The Proceedings presents the issue of Th1-type cytokines in inducing recurrent spontaneous abortions of unexplained etiology. The roles of 2-glycoprotein 1-2 (GP1-2) dependent anticardiolipin antibody, lupus anticoagulant, antiphospholipids, anti-thyroid antibody and anti-nuclear antibody in miscarriages are also described. The rising global human population, particularly in the developing countries, has driven the need for new and safer methods of contraception. Fertility regulation by vaccines is thus an interesting proposition. The section on contraceptive vaccines discusses the latest advances in this area and describes the current status of vaccines based on hCG, sperm antigens, zona pellucida glycoproteins and riboflavin carrier proteins. The issues of mucosal immunity and strategies for enhancing local genital immune responses to combat HIV infection are discussed. The role of inflammatory and related cytokines in chorioamnionitis is described. The contents of this Proceedings describes various facets of reproductive immunology which will help us to design strategies to combat genital infections and miscarriages caused by immunological etiology. Descriptions of the molecular basis of gamete recognition, implantation and survival of the allogenic fetus will help in designing strategies for overcoming infertility and also new contraceptive approaches. The Proceedings will be useful to researchers and clinicians involved in basic or applied research in the disciplines of reproductive biology.

Immunological Aspects of Reproduction in Mammals D. B. Crichton, 2014-05-20 Immunological Aspects of Reproduction in Mammals contains papers presented during a symposium at the University of Nottingham Easter School The scholarly presentations provide a wealth of information on the field of reproductive immunology and indicate just how complex this field is and how many questions still remain to be answered The book begins with reviews of the current status of the complexities and uncertainties of the cellular basis of the immune response and the structure and function of antibodies This is followed by separate chapters on the assessment and interpretation of the phenomena surrounding autoimmune and isoimmune reactions to spermatozoa advances in defining the distribution and degree of exposure of major histocompatibility antigens the reproductive immunology of the mouse horse and sheep and fetal and neonatal immunity Subsequent chapters present studies of immunization of several species with either the hypothalamic hormone LH RH

pituitary gonadotrophins or ovarian steroids and studies directed towards efforts to enhance animal production by either active or passive immunization of female farm animals against steroid hormones This book will be a valuable reference text for those already involved in the field and a stimulus for others to enter this complex and fascinating area of research

Current and Future Reproductive Technologies and World Food Production G. Cliff Lamb, Nicolas DiLorenzo, 2013-10-29 This book addresses the impacts of current and future reproductive technologies on our world food production and provides a significant contribution to the importance of research in the area of reproductive physiology that has never been compiled before It would provide a unique opportunity to separate the impacts of how reproductive technologies have affected different species and their contributions to food production Lastly no publication has been compiled that demonstrates the relationship between

developments in reproductive management tools and food production that may be used as a reference for scientists in addressing future research areas. During the past 50 years, assisted reproductive technologies have been developed and refined to increase the number and quality of offspring from genetically superior farm animal livestock species. Artificial insemination, AI, estrous synchronization, and fixed time AI, semen and embryo cryopreservation, multiple ovulation and embryo transfer (MOET), in vitro fertilization, sex determination of sperm or embryos, and nuclear transfer are technologies that are used to enhance the production efficiency of livestock species. *Reproduction in Domestic Animals* Perry T. Cupps, 1991-02-20. A unique feature of this book is the focus on large domestic animals. Previous editions were considered the Bible of reproductive physiology. It covers basic large animal reproductive physiology, provides species-specific information, and is suitable as a textbook for upper division courses.
