Conservation of Caribbean Island Herpetofaunas Volume 1: Conservation Biology and the Wider Caribbean Adrian Hailey, Byron S. Wilson, Julia A. Horrocks, 2011-04-07 Most of the islands of the Caribbean have long histories of herpetological exploration and discovery and even longer histories of human mediated environmental degradation Collectively they constitute a major biodiversity hotspot a region rich in endemic species that are threatened with extinction This two volume series documents the existing status of herpetofaunas including sea turtles of the Caribbean and highlights conservation needs and efforts Previous contributions to West Indian herpetology have focused on taxonomy ecology and evolution particularly of lizards This series provides a unique and timely review of the status and conservation of all groups of amphibians and reptiles in the region This volume introduces the issues particularly affecting Caribbean herpetofaunas and gives an overview of evolutionary and taxonomic patterns influencing their conservation Chapters focus on groups that have been relatively neglected in the Caribbean amphibians and snakes A major chapter describes the problem of invasive species of amphibians and reptiles in the West Indies Three chapters then deal with islands of the Wider Caribbean that share many of the same problems but fall outside the West Indies biogeographic region the Atlantic islands of the Bermuda group the Dutch continental shelf islands of Aruba Cura ao and Bonaire and the Neotropical islands of Trinidad and Tobago The book will be useful to biologists and conservationists working in or visiting the Caribbean and internationally as a summary of the current situation in this diverse and important region Alien

Reptiles and Amphibians Fred Kraus, 2008-12-19 Transportation of species to areas outside their native ranges has been a feature of human culture for millennia During this time such activities have largely been viewed as beneficial or inconsequential However it has become increasingly clear that human caused introductions of alien biota are an ecological disruption whose consequences rival those of better known insults like chemical pollution habitat loss and climate change Indeed the irreversible nature of most alien species introductions makes them less prone to correction than many other ecological problems Current reshuffling of species ranges is so great that the present era has been referred to by some as the Homogocene in an effort to reflect the unique magnitude of the changes being made These alien interlopers often cause considerable ecological and economic damage where introduced Species extinctions food web disruptions community alterations ecosystem conversion changes in nutrient cycling fisheries collapse watershed degradation agricultural loss building damage and disease epidemics are among the destructive and frequently unpredictable ecological and economic effects that invasive alien species can inflict The magnitude of these damages continues to grow with virtually all environments heavily used by humans now dominated by alien species and many natural areas becoming increasingly prone to alien invasion as well Attention to this problem has increased in the past decade or so and efforts to prevent or limit further harm are gaining wider scientific and political acceptance

Naturalized Reptiles and Amphibians of the World Christopher Lever, 2003 This book describes how the various alien reptiles and amphibians now living in the wild throughout the world were first introduced how they subsequently became naturalized their present distribution and status in those countries to which they were introduced and their ecological and socioeconomic impact if any on the native biota and local economies Many species have had a more or less neutral impact being neither beneficial nor harmful However several have had a positive ecological or socioeconomic impact while some such as the cane toad have had an extremely destructive effect The criteria for inclusion of a species are that it should have been imported from its natural range to a new country by human agency either accidentally or deliberately and that it should currently be established in the wild in self-maintaining and self-perpetuating populations unsupported by and independent of mankind

The Reptiles and Amphibians of the Dutch Caribbean Robert Powell, Robert W. Henderson, John S. Parmelee, 2005

patterns and general ideas about the status of amphibians in the Anthropocene The Conservation and Biogeography of Amphibians in the Caribbean offers an important baseline against which future amphibian conservation can be measured in the face of climate change rising sea level and a burgeoning human population Covers over 300 species **Wildlife of the Eastern Caribbean** Steve Holliday, Gill Holliday, 2025-07 A richly illustrated photographic field guide This is the first photographic field identification guide to Eastern Caribbean birds mammals amphibians reptiles land crabs dragonflies and butterflies Beautiful and easy to use the guide covers 17 island groups stretching from the Virgin Islands south through the Lesser Antilles from Anguilla to Grenada where a unique range of flora and fauna evolved in relative isolation Around 30 percent of all the species included are endemic to the region For each island group there is a list of endemic and don't miss species alongside suggested sites to visit site accessibility is indicated where possible Whether you live in the Eastern Caribbean or are visiting this is an indispensable guide to the spectacular wildlife of its beautiful islands Covers all the birds mammals amphibians reptiles land crabs dragonflies and butterflies that are likely to be seen and includes an introduction to each group Features more than 420 species and over 850 stunning color photos Species accounts highlight key identification features and information on distribution and habitat preferences Includes richly illustrated introductory sections with maps and habitat information Details conservation status and actions for more than 100 globally threatened species *Key to the Herpetofauna of the Continental United States and Canada* Robert Powell, Joseph T. Collins, Errol D. Hooper, Jr., 2019-07-26 This profusely illustrated comprehensive key for identifying amphibians and reptiles from the continental United States and Canada incorporates a wealth of scientific findings Since the first edition was published in 1998 and the second in 2012 the number of currently recognized species of native amphibians and reptiles in the area covered by this key has increased from 545 to 634 to 685 and the number of established non native species has increased from 39 to 58 to 67 The increase in native taxa reflects the dynamic nature of modern systematics and the use of new especially molecular techniques to elucidate relationships and redefine species boundaries The increase in non native species reflects the porosity of the North American borders when it comes to controlling animal imports The key is easy to use and illustrated with outstanding line drawings that show details of color patterns and structures used for identification To accommodate the additional taxa the number of line drawings in this third edition has increased from 257 to 279 to 295 In addition nine maps illustrate the distributions of species that have been recognized since the publication of maps in the most recent editions of the Peterson Field Guides to the reptiles and amphibians of eastern central and western North America A large number of annotations detail current taxonomic ambiguities or disagreements and the literature cited has been expanded Collectively these features enhance opportunities to teach and learn the classification and identification of amphibians and reptiles in the continental United States and Canada *Natural History of West Indian Reptiles and Amphibians* Robert W. Henderson, Robert Powell, 2009 The reference source that biologists interested in West Indian herpetofauna have been waiting for Steven Reichling curator
