Dolphin Communication and Cognition Denise L. Herzing, Christine M. Johnson, 2015-09-25. Experts survey the latest research on dolphin communication and cognition, offering a comprehensive reference to findings in the laboratory and from the field. Dolphin researchers have collected an impressive amount of data over the last twenty years thanks to advances in technology for monitoring, recording, and analyzing dolphin behavior, as well as increasing interest in exploring and modeling dolphins' cognitive capacities. This volume offers a comprehensive reference to the latest research on dolphin communication and cognition, reporting on findings from both the laboratory and the field. The contributors review a wide range of topics, including vocalization, abstract reasoning, abilities, imitation, and learning; social cognition; echolocation; and ethical issues in working with cetaceans. The book begins by examining the dolphin brain and its evolution, the anatomy of its unique sound production and reception systems, and its sensory abilities. It next treats communication, reviewing the complexity of dolphins' vocalization and then describes research on cognition from both experimental and developmental perspectives. Finally, the book considers the future of dolphin research, including a series of provocative questions that remain unanswered, posed by the volume's expert contributors.

Is Anyone Listening? Denise L. Herzing, 2024-11-14. From a leading researcher on dolphin communication, a deep dive into the many ways animal species communicate with their kin, their neighboring species, and us. If you could pose one question to a dolphin, what would it be? And what might a dolphin ask you? For forty years, researcher and author Denise L. Herzing has investigated these and related questions of marine mammal communication. With the assistance of a friendly community of Atlantic spotted dolphins in the Bahamas, Herzing studies two-way communication between different dolphin species and between humans and dolphins using a variety of cutting-edge experiments. But the dolphins are not the only ones talking, and in this wide-ranging and accessible book, Herzing explores the astonishing realities of interspecies communication.

a skill that humans currently lack Is Anyone Listening connects research on dolphin communication to findings from Jane Goodall on chimpanzees Dian Fossey on mountain gorillas Cynthia Moss on African elephants and others driving today's exploration of possible animal languages Although humans have long attempted to crack animal communication codes only now do we have the advanced machine learning tools to help As Herzing reveals researchers are finding fascinating hints of language in nonhuman species including linguistic structures vowel equivalents and complex repeated sequences By looking at the many ways animals use and manipulate signals we see that we've only just begun to appreciate the diversity of animal intelligence and the complicated and subtle aspects of animal communication Considering dolphins and other nonhuman animals as colleagues instead of research subjects Herzing asks us to meet animals as both speakers and listeners as mutually curious beings and to listen to what they are saying
